About the Trainer

TH

Mr Tay Hoo Wee

Producer, Asia Media Alliance
Director, Asia Media Academy

CURRENT ROLES

Producer at Asia Media Alliance (2024–present); Director at Asia Media Academy (2020–present).

FILM & TV TRACK RECORD

Team Lead, Camokakis Content (Digital) and Senior Commissioning Editor at So Drama! Entertainment; Executive Producer at Stardust Pictures; VP Physical Productions at Infinite Frameworks Studios.

QUALIFICATIONS

BA (Hons) Digital Film Making, Middlesex University; Diploma in Digital Film Production, SAE Institute Singapore.

ICE-BREAKER

Let's Know Each Other

1. Your name and organisation / role.
2. Your experience with video creation or editing (if any).
3. What videos do you want to create after this course — marketing, training, social media?

© Tertiary Infotech Academy Pte Ltd

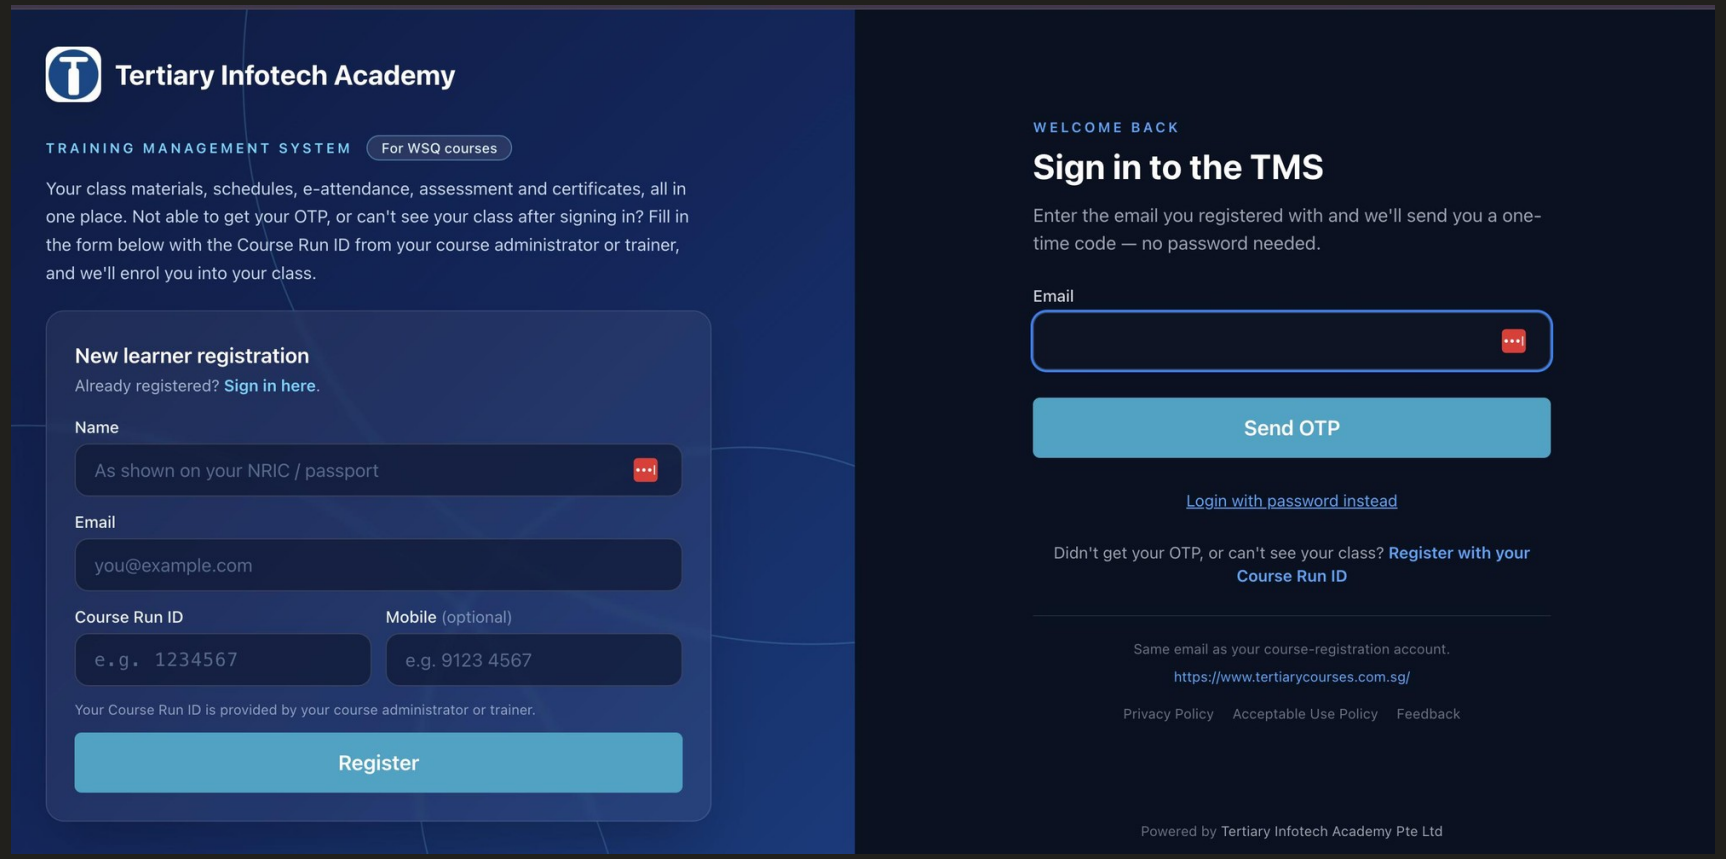

Ground Rules

1. Set your mobile phone to silent mode.
2. Participate actively — no question is too small.
3. Respect each other's views.
4. One conversation at a time.
5. Exit quietly for calls or breaks.
6. Be punctual and attend both days to get the most from the course.

© Tertiary Infotech Academy Pte Ltd

SCHEDULE · 9:30AM–5:30PM · 15 HOURS

Lesson Plan — 2 Days, 7.5 hours/day

1

Day 1 · 9:30–13:45 · Topic 1 (3 h 45 min)

Introductions and Higgsfield sign-up; the impact of AI on video and its use cases; Labs 1–3.

2

Day 1 · 13:45–17:30 · Topic 2

Elements: characters, locations, props (Lab 4); shots and takes in Cinema Studio (Lab 5); Day 1 recap.

3

Day 2 · 9:30–10:45 · Topic 2 (5 h in total)

Cut, caption and assess the scene (Lab 6).

4

Day 2 · 10:45–17:30 · Topic 3 (6 h 15 min)

Fix, voice, music and effects (Labs 7–8); use-case sprint (Lab 9); mini capstone (Lab 10); ethics of GenAI video.

5

Day 2 · 17:10–17:30 · close of Topic 3

Course summary, questions and the course feedback survey.

6

Lunch · 30 minutes each day

Day 1 12:45–13:15 · Day 2 12:30–13:00. Refreshments are taken during activity time.

© Tertiary Infotech Academy Pte Ltd

Course Outline

1

Topic 1 — Create and Edit Video Script Using Generative AI (GAI)

Script, plan and make your first video: Higgsfield sign-up, Supercomputer and AI Director scripts and shot lists, standards, work plan and credit budget. (Labs 1–3)

2

Topic 2 — Improve Video Footage on GAI Powered Video Platforms

Build, shoot and assess: Elements (characters, locations, props), references, Cinema Studio shots and takes, Draft mode, cut, captions and quality scoring. (Labs 4–6)

3

Topic 3 — Apply new AI technologies to Improve Video Production

Fix, finish and publish: replace objects, upscale, reframe, voice, music, effects, model comparison, a published ad and your own mini capstone video. (Labs 7–10)

© Tertiary Infotech Academy Pte Ltd

TOPIC 1

Create and Edit Video Script Using Generative AI (GAI)

The impact of AI on video · use cases · Supercomputer scripts · AI Director shot lists · standards & work plans

1. Lab 1 — Sign Up and Make Your First 15-Second Video
2. Lab 2 — Write the Script and Shot List with Supercomputer and AI Director
3. Lab 3 — Set the House Rules: Standards, Work Plan and Credit Budget

© Tertiary Infotech Academy Pte Ltd

Key Concepts — Topic 1

1

AI's impact & use cases

A US$2,000 TV ad, a 14-day feature: AI movies, micro dramas, influencers, singers and marketing videos already earn audiences.

2

The lazy prompt

Format + vibe gets you a clip in one line, but the model then decides your character, world and camera.

3

Scripts with Supercomputer

Who / where / what happens, then a script and a numbered shot list, drafted and refined in one chat.

4

AI Director

Inside a project, AI Director writes the script and a shot-by-shot storyboard from your brief (Lab 2 asks for six shots).

5

Standards & guidelines

A one-page sheet: platform specs, consent, licensing, AI disclosure and a Draft-first credit rule.

6

Work plans & credit budgets

Phases, owners, timelines and a credit budget: 45 credits for a 15 s Draft, 240 for the 1080p final.

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Topic 1

1

Lab 1 — Sign Up and Make Your First 15-Second Video

Two 15-second Draft clips of the same idea, plus a log of what the model decided and three quality issues you spotted.

2

Lab 2 — Write the Script and Shot List with Supercomputer and AI Director

A reviewed 15-second script and a 6-shot shot list in the three-part prompt format, saved in your project brief.

3

Lab 3 — Set the House Rules: Standards, Work Plan and Credit Budget

A one-page standards & guidelines sheet, a phased work plan with timelines and a credit budget, and your own /house-standards skill.

© Tertiary Infotech Academy Pte Ltd

WHY THIS COURSE

Two 15-second films. Two prompts. Zero cameras.

Both clips on the next slides were made for this course in Higgsfield with Seedance 2.5, one prompt each, sound included. By the end of Day 2 you will direct your own.

© Tertiary Infotech Academy Pte Ltd

SOLA: a 15-second product ad

A product ad with a hero packshot, written as five timed shots

▶ Click to play · Seedance 2.5 · 1080p · 16:9 · 15 s · native audio · 240 credits

THE SHOTS WE PROMPTED

0–3 s
extreme close-up, sun slides across the bottle

3–6 s
runner grabs it mid-stride (tracking)

6–9 s
drink, ice clinks (slow motion)

9–12 s
wide rooftop run, drone pulls back

12–15 s
hero packshot with space for the logo

© Tertiary Infotech Academy Pte Ltd

Ringfall: a 15-second epic sci-fi scene

An epic scene with an establishing shot, a reveal and a payoff

▶ Click to play · Seedance 2.5 · 1080p · 16:9 · 15 s · native audio · 240 credits

THE SHOTS WE PROMPTED

0–4 s
wide: smoking starship wreck, twin suns

4–8 s
pilot steps out, handheld follow

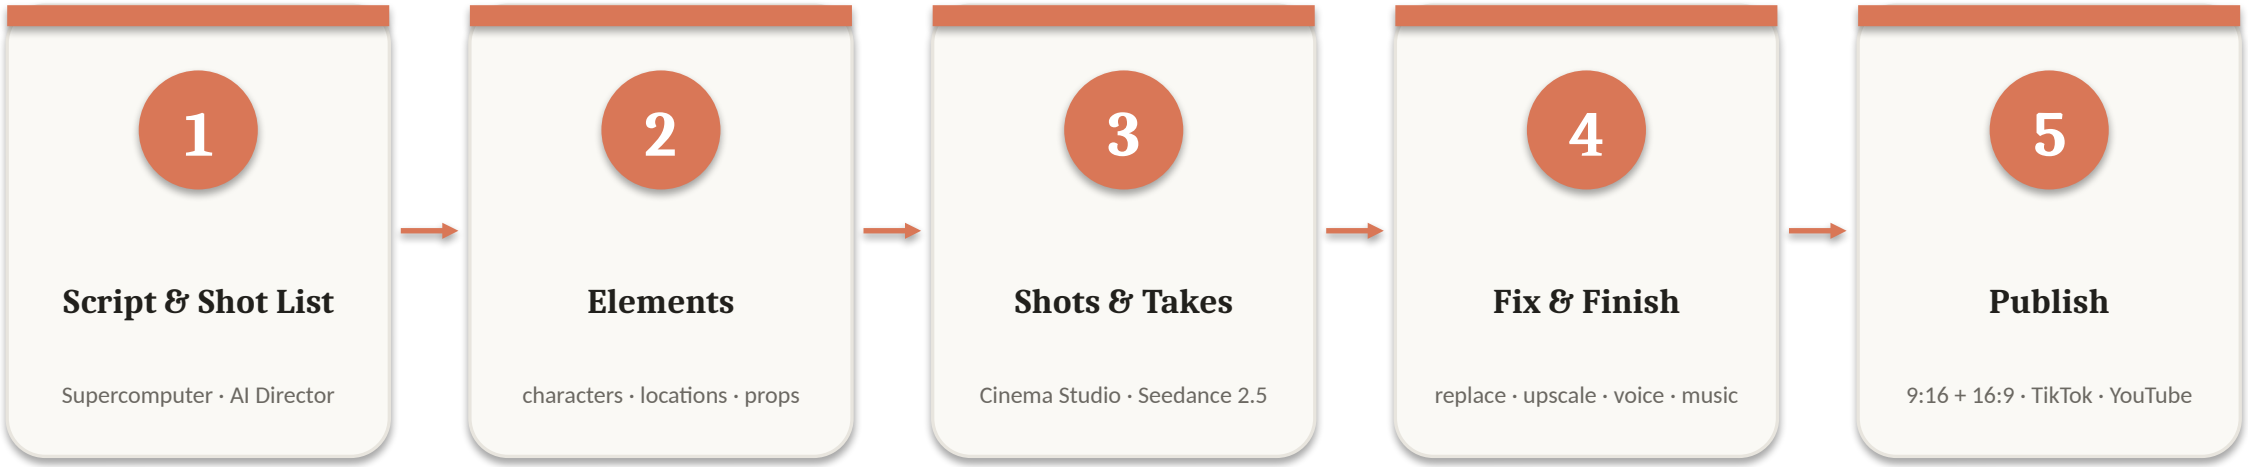

8–11 s
close-up: awe, ground trembles

11–15 s
extreme wide: the ring rises, crane up

© Tertiary Infotech Academy Pte Ltd

THE PROCESS YOU'LL RUN — EVERY LAB MAPS TO A STAGE

The Higgsfield Video Pipeline

ONE PLATFORM, FIVE STAGES

You script and plan in Supercomputer (Topic 1), build Elements and direct takes in Cinema Studio (Topic 2), then fix, finish and publish (Topic 3).

© Tertiary Infotech Academy Pte Ltd

AI has changed the economics of video

Budgets, crews and timelines that used to decide who could make video no longer do

US$2K

a national TV ad

Kalshi's NBA Finals spot: about US$2,000 and 15 clips cut from 300–400 generations (The Keyword)

14 days

a 95-minute feature

Hell Grind: 15 people, under US$500K (CineD)

45

credits a test take

one 15-second Seedance 2.5 Draft in Higgsfield, before you commit to 1080p

The new bottleneck is direction: knowing what to ask for, judging the take, and fixing what fails. That is this course.

© Tertiary Infotech Academy Pte Ltd

What AI changes at each stage of production

Stage	Before AI	With AI (in Higgsfield)
Script & storyboard	Writer + storyboard artist, days	Supercomputer / AI Director, minutes; you review and edit
Casting & locations	Auditions, permits, travel	Elements: cast, sets and props generated and saved
The shoot	Crew, camera, lights, a day per scene	Cinema Studio takes: camera, lens, light set in the prompt
Fixes & reshoots	Re-book cast and crew	Replace an object, regenerate one shot, upscale
Sound & music	Composer, voice artist, studio	Native audio, generated soundtrack, consented voice
New risks	—	Likeness, rights, disclosure, quality drift: the platform rules apply

TIP: Ask: which of these jobs disappears, and which becomes more valuable? (Direction, review, compliance.)

© Tertiary Infotech Academy Pte Ltd

Five ways AI video already earns audiences

1

AI movie

Hell Grind: a 95-minute Higgsfield feature, 15 people, 14 days (CineD).

2

AI micro drama

Kling's Mountains & Seas premiered on Kuaishou on 13 Jul 2024: 52M+ views (Caixin).

3

AI influencer

Aitana López, an AI model, earns up to €10,000 a month (Euronews).

4

AI singer

Xania Monet: first AI act on a Billboard radio chart, No. 30 Adult R&B Airplay (Nov 2025).

5

AI marketing

Kalshi's NBA Finals ad: about US$2,000, made with Google Veo 3 (The Keyword).

6

Your turn

Lab 9 ends with your own 15-second ad, published or uploaded to the TMS.

© Tertiary Infotech Academy Pte Ltd

USE CASE 1 · AI MOVIE

AI movies: cinema-grade scenes from a prompt

Long-form stories need what Topic 2 teaches: Elements that keep every face and set consistent

▶ Open in YouTube

◀ CLICK TO PLAY · THE FILM

The Most Insane AI Film You'll See Today (Seedance 2.5)

Video: Theoretically Media. A short film made with Seedance 2.5, the model you will use in Labs 1–9.

ALSO IN THE NEWS

Hell Grind — Higgsfield Originals (2026)

95 minutes, under US$500K, 15 people, 14 days (CineD). Billed by Higgsfield as the first AI feature film.

© Tertiary Infotech Academy Pte Ltd

AI micro dramas: one-minute episodes, no film set

Short, serial, vertical stories: the format Lab 9's variation prompt practises

▶ Open in YouTube

◀ CLICK TO PLAY · THE SHORT

The Healer's Refusal — an AI-generated Chinese micro drama

A vertical, cliff-hanger episode made entirely with AI: the format built for TikTok and YouTube Shorts.

ALSO IN THE NEWS

Mountains & Seas: Breaking Waves — Kling AI

Kuaishou's AI micro drama premiered 13 Jul 2024 and passed 52M views (Caixin).

WHAT IT MEANS FOR YOU

Two characters, one twist, 9:16. Save the cast as Elements so episode 2 looks like episode 1.

© Tertiary Infotech Academy Pte Ltd

AI influencers: one face, posting every day

Higgsfield's AI Influencer tool and a saved @char Element make the same face repeatable

▶ Open in YouTube

◀ CLICK TO PLAY · THE SHORT

Creating an AI influencer with Higgsfield AI Influencer Studio

A creator builds a consistent virtual influencer inside Higgsfield (Shafin Tech).

ALSO IN THE NEWS

Aitana López — BBC World Service report

An AI model earning up to €10,000 a month, about €3,000 on average (Euronews).

WHAT IT MEANS FOR YOU

Consistency is the product: a character sheet plus an @char Element. Disclose that the person is synthetic.

© Tertiary Infotech Academy Pte Ltd

USE CASE 4 · AI SINGER

AI singers: a voice, a song, a music video

Music video, voice and soundtrack: Lab 8 gives you all three inside Higgsfield

▶ Open in YouTube

◀ CLICK TO PLAY · THE SHORT

Pretty Little Baby — an AI cover (Ai Music Sunny)

An AI singer covering Connie Francis's song: a fast-growing Shorts genre, and a live rights question.

ALSO IN THE NEWS

Xania Monet — How Was I Supposed to Know?

First AI act on a Billboard radio chart: No. 30 on Adult R&B Airplay (Billboard, Nov 2025). Music made with Suno.

WHAT IT MEANS FOR YOU

Covering someone else's song or voice needs the rights holder's permission. Original music and your own voice are safe ground.

© Tertiary Infotech Academy Pte Ltd

AI marketing: studio-quality ads in minutes

The use case you will run end to end in Lab 9: one product photo to a published ad

▶ Open in YouTube

◀ CLICK TO PLAY · THE SHORT

Higgsfield Marketing Studio — UGC ads in seconds

A creator makes UGC-style product ads in Higgsfield's Marketing Studio (AI Tech Pro).

ALSO IN THE NEWS

Kalshi NBA Finals ad — PJ Ace (2025)

About US$2,000; 300–400 generations cut to 15 clips with Google Veo 3; aired in Game 3 of the NBA Finals (The Keyword).

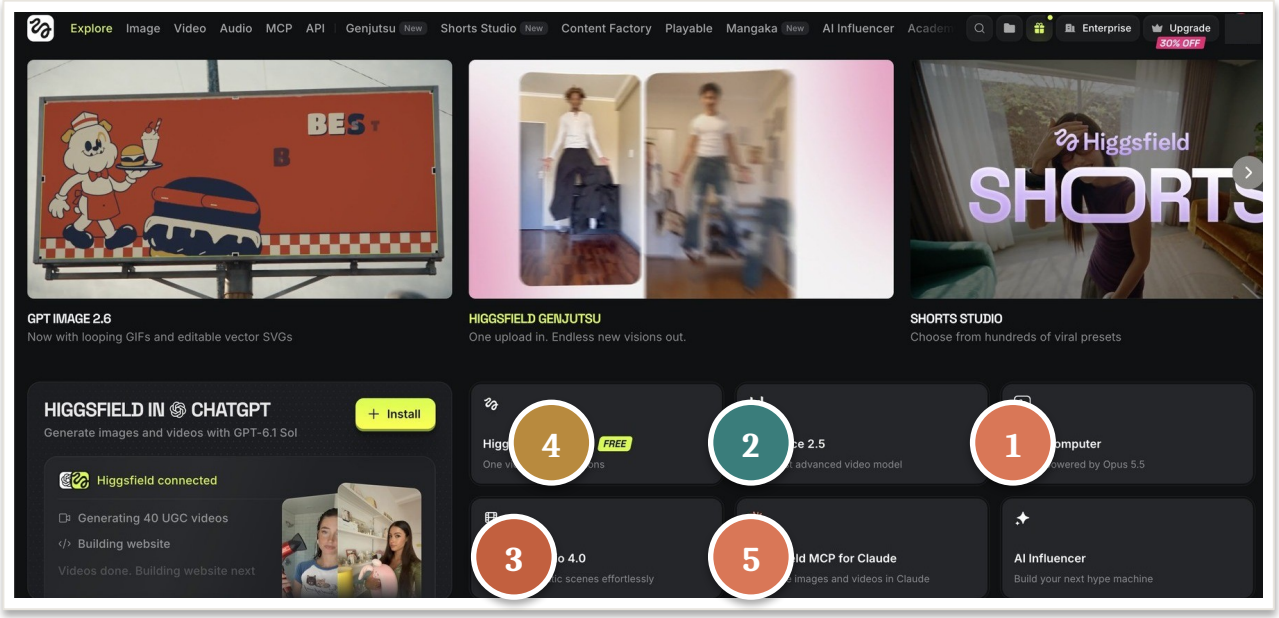

WHAT IT MEANS FOR YOU

Start from a clean product photo, keep the product identical in every shot, label the ad as AI-generated.

© Tertiary Infotech Academy Pte Ltd

Every tool you need sits on one home page

Learn five tiles today and you can find everything else from them

1 Supercomputer

The agent: brief it in plain English, it plans, prompts and asks before it spends.

2 Seedance 2.5

ByteDance's video model: 4–30 s, up to 1080p, native sound, 50 references.

3 Cinema Studio 4.0

The director's chair: camera, lens, light, colour, genre.

4 Genjutsu

One upload, many versions: swap objects, copy motion.

5 Higgsfield in Claude & ChatGPT

The same studio through an MCP connector.

DISCLOSURE

Trainer's affiliate link: the trainer may earn a commission; you pay the normal price.

PLAN FOR THE LABS

Labs run on the website, which needs a paid plan. Plus: US$49/month or US$39 billed yearly for 1,000 credits (8 Nov 2026).

FREE TRIAL TERMS

3 days, needs a card, renews to Plus unless cancelled within 3 days; trial credits worked only through the Higgsfield MCP, not the website (8 Nov 2026).

© Tertiary Infotech Academy Pte Ltd

Keep these three open beside the labs

1

Higgsfield API docs

For automation: authentication, requests, polling, webhooks and model endpoints — docs.higgsfield.ai/docs

2

Supercomputer and Skills

The agent, its Skills Marketplace and skill import from Claude, Claude Code, Codex and ChatGPT — higgsfield.ai/supercomputer-intro

3

Course labs

Every prompt on one copy page (labs/prompts.html), plus instruction PDFs and mock assets for Labs 1–10 — labs/index.html

© Tertiary Infotech Academy Pte Ltd

The models inside Higgsfield

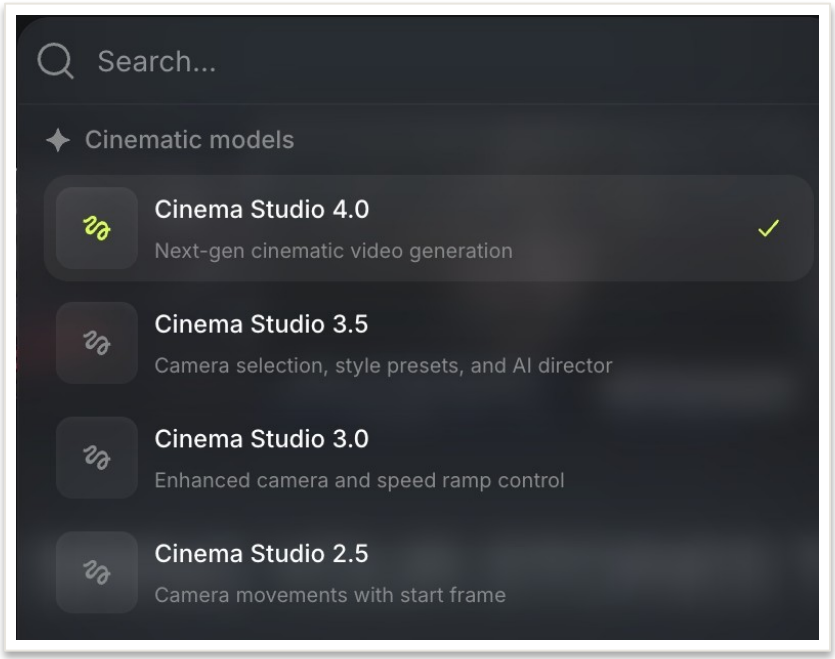

Model	Made by	Best for	Length · quality
Seedance 2.5	ByteDance	General video, native sound, 50 references	4–30 s · up to 1080p
Seedance 2.5 Draft	ByteDance	Cheap test takes you finalise later	4–30 s · 480p
Cinema Studio 4.0	Higgsfield	Camera, lens, light and genre control	next-gen cinematic
Kling 4.0 / Flash	Kuaishou	Motion quality, multi-shot	3–30 s · 1080p
Higgsfield Genjutsu	Higgsfield	Replace objects, copy motion, many versions	4–30 s · 1080p

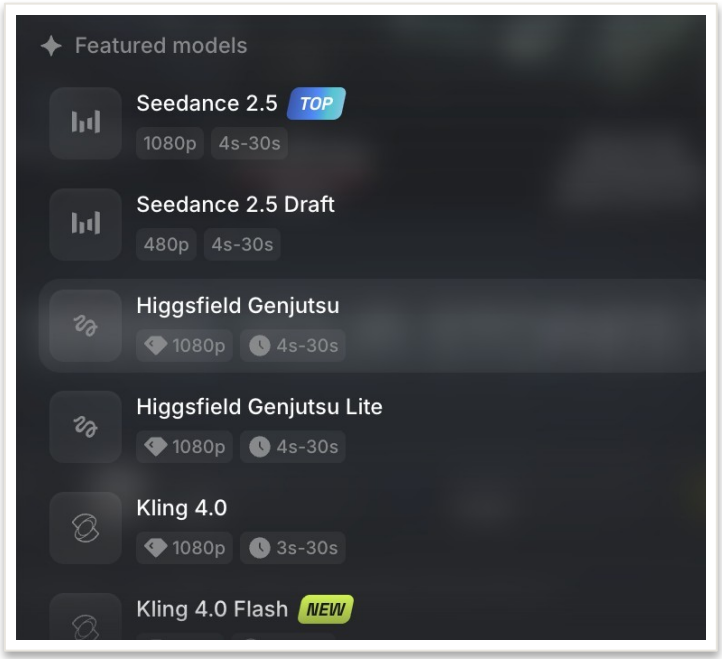

TIP: Pick per shot, not per project: Draft to explore, Seedance 2.5 to finish, Genjutsu to fix.

© Tertiary Infotech Academy Pte Ltd

Two menus, one decision: which engine shoots this take?

You will compare two of these on the same prompt in Lab 9

Cinema Studio versions

4.0 is the next-gen cinematic model; 3.5 added camera selection, style presets and AI Director; 3.0 added speed ramps; 2.5 moves the camera from a start frame.

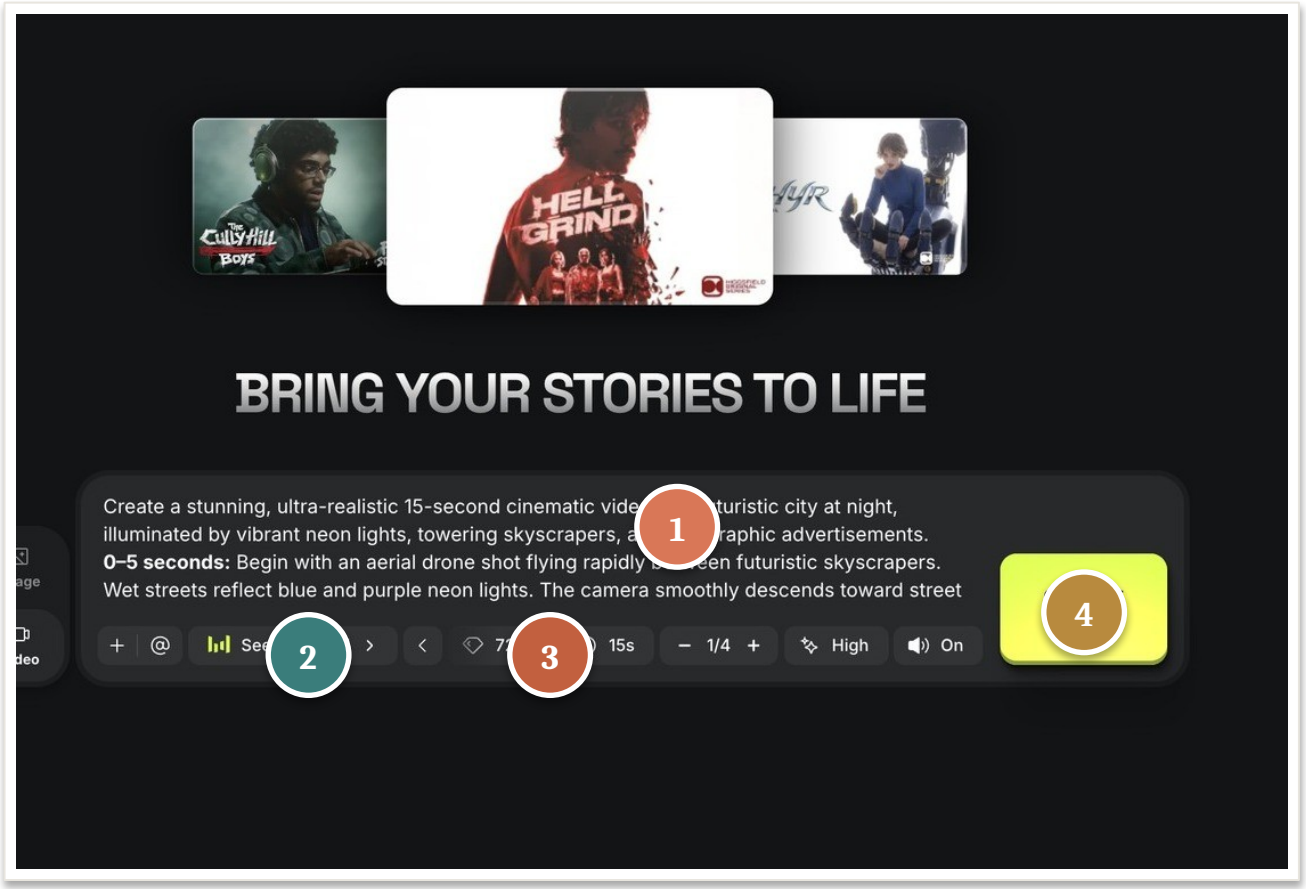

The video model list

Seedance 2.5 (TOP) and its 480p Draft, Genjutsu and Genjutsu Lite, Kling 4.0 and the new 4.0 Flash, each with its resolution and 3–30 s range.

© Tertiary Infotech Academy Pte Ltd

Type one line, get fifteen seconds of film

The fastest route from idea to clip, and the one Lab 1 starts with

1. **Describe the scene**
   Plain English in the prompt box; @ adds a saved character or location.

2. **Pick the model**
   Seedance 2.5 here; switch to Draft for cheap tests.

3. **Set quality and length**
   720p and 15 s cost 105 credits; 1080p costs 240.

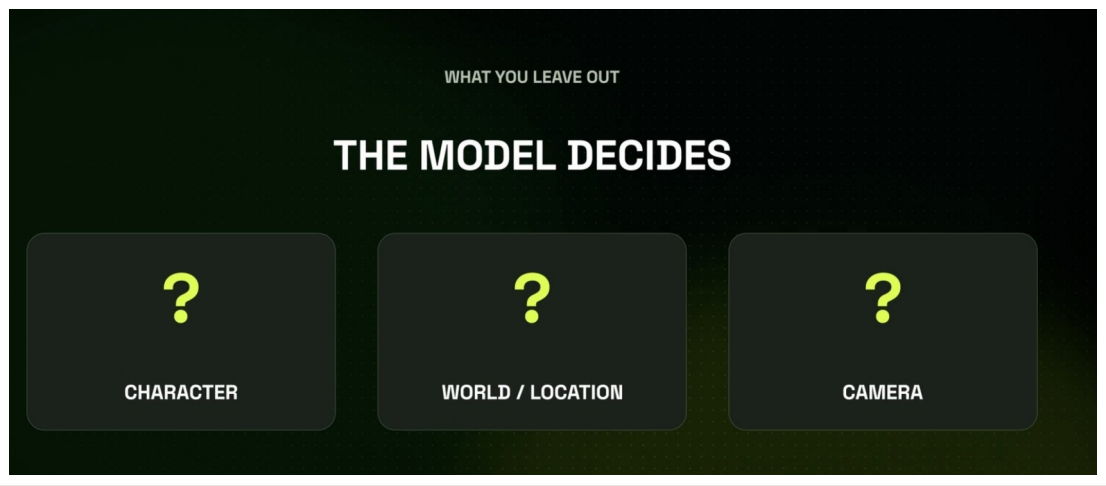

4. **Generate**
   Credits are shown on the button before you press it.

© Tertiary Infotech Academy Pte Ltd

A lazy prompt works, but the model makes your choices

Speed now, inconsistency later: know the trade before you press Generate

Format + vibe

'15-second video' + 'epic sci-fi scene' is enough to generate. That is the lazy prompt you type first in Lab 1.

What you leave out, the model decides

Character, world/location and camera all become the model's guess, so every take tells a different story.

© Tertiary Infotech Academy Pte Ltd

LAB 1 PREVIEW · TESTED IN HIGGSFIELD

We ran the lazy prompt: the model chose everything

Same prompt you will type in Lab 1. No character, no plot: proof that unbriefed means undirected

▶ Click to play · Seedance 2.5 Draft · 480p · 16:9 · 15 s · 45 credits · run 9 Nov 2026

THE SHOTS WE PROMPTED

Prompt
'Create a 15-second video of an epic sci-fi scene.'

Character
none: the model left people out

World
abstract space and crystal shards

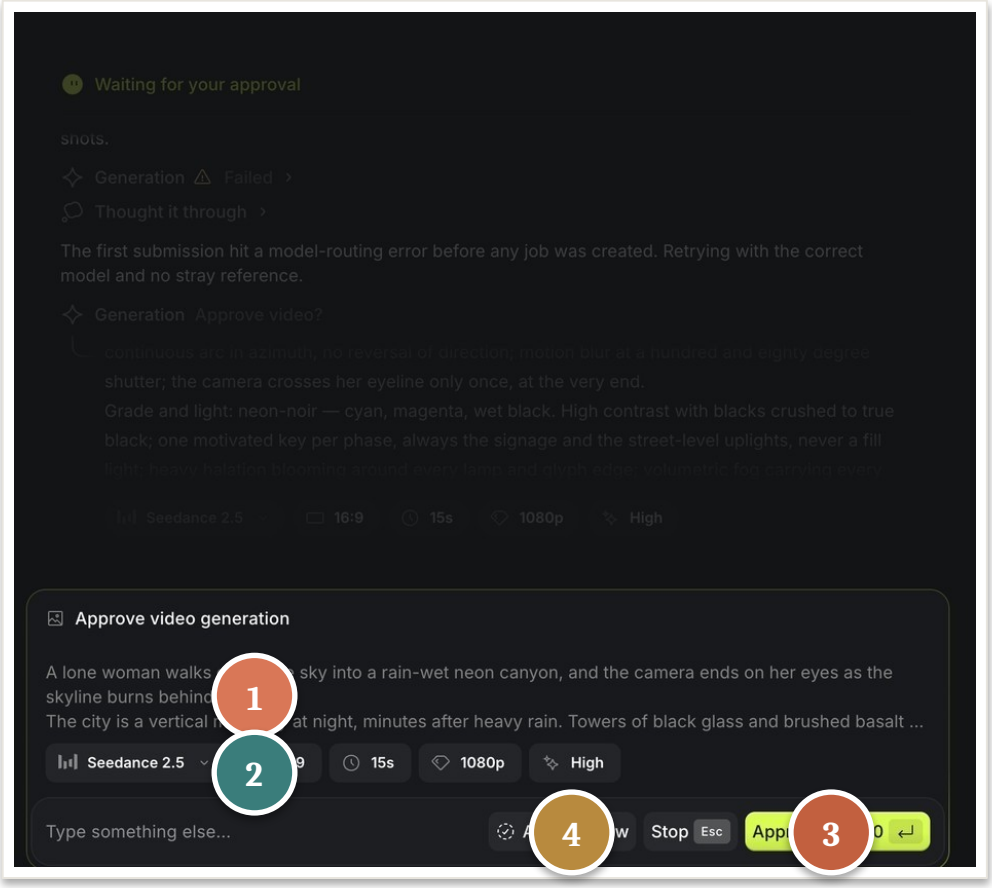

Camera
a warp-speed fly-through, no story beats

Lesson
brief who / where / what happens (Lab 2)

© Tertiary Infotech Academy Pte Ltd

Supercomputer asks before it spends a credit

An agent with a budget gate: you stay the producer

1. **The prompt it wrote**
   Read the scene, shots and grade it built from your chat.

2. **The settings**
   Model, ratio, length, resolution and quality, all editable.

3. **Approve with the price**
   240 credits for 15 s at 1080p; switch to Draft first.

4. **Leave 'Always allow' off**
   Approve each spend by hand in class.

© Tertiary Infotech Academy Pte Ltd

TYPES OF QUALITY ISSUES

Six defects every AI video can have

1. **Identity drift**
   The hero's face, hair or clothes change between shots.

2. **Prop teleport**
   The case swaps hands or vanishes mid-scene.

3. **Broken physics**
   Hands merge, liquids melt, people walk through tables.

4. **Audio mismatch**
   Footsteps without feet, lips out of sync, music over dialogue.

5. **Garbled text**
   Signs and labels turn into nonsense letters.

6. **Wrong spec**
   Wrong ratio, 480p left in the final, cut mid-movement.

© Tertiary Infotech Academy Pte Ltd

Sign Up and Make Your First 15-Second Video

LAB 1

MAPS TO spot quality issues; generate a new video from scratch on a GenAI video platform

Sign up to Higgsfield through the course link, tour the two doors (Supercomputer and Cinema Studio), then make the same 15-second sci-fi clip twice: once from a one-line lazy prompt, once after Supercomputer interviews you. Compare what the model decided for you.

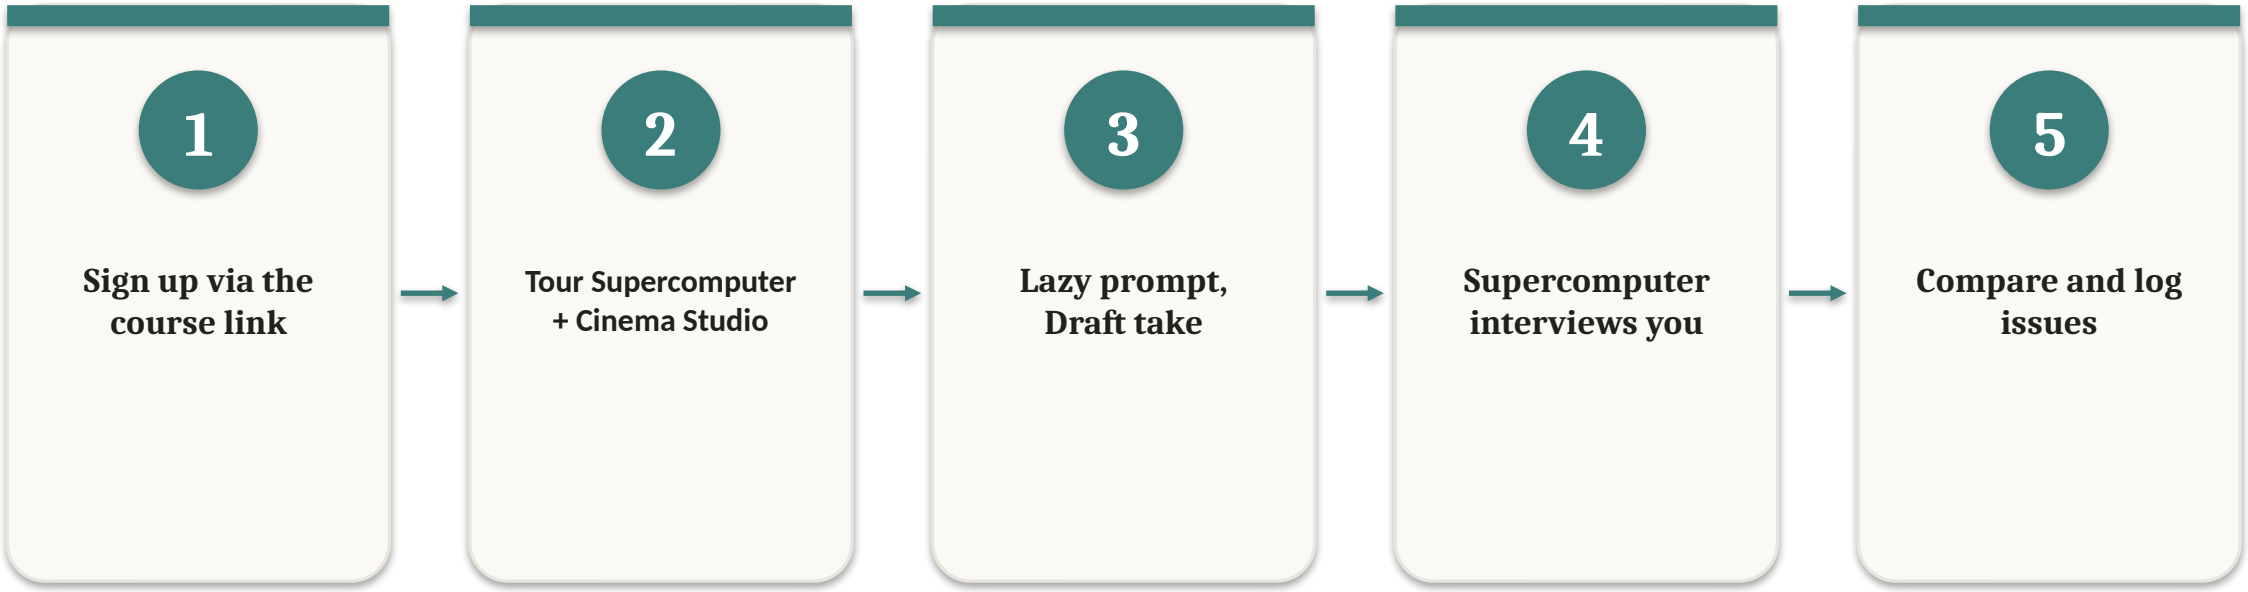

You'll build

Two 15-second Draft clips of the same idea, plus a log of what the model decided and three quality issues you spotted.

Tools: Higgsfield: Cinema Studio (Video), Supercomputer, Seedance 2.5 Draft

© Tertiary Infotech Academy Pte Ltd

How Lab 1 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 1 — Prompts

PROMPT — THE LAZY PROMPT (FORMAT + VIBE)

```
Create a 15-second video of an epic sci-fi scene.
```

PROMPT — MAKE SUPERCOMPUTER INTERVIEW YOU FIRST

```
I want a 15-second epic sci-fi scene for a cinema-style trailer moment.
Before you write or generate anything, ask me up to five short questions about:
the main character, the world/location, what happens, the camera, and the sound.
Then write the full prompt with timed shots and wait for my approval.
Use Seedance 2.5 Draft, 16:9, 15 seconds, sound on.
```

© Tertiary Infotech Academy Pte Ltd

Sign Up and Make Your First 15-Second Video

✓ Check your work

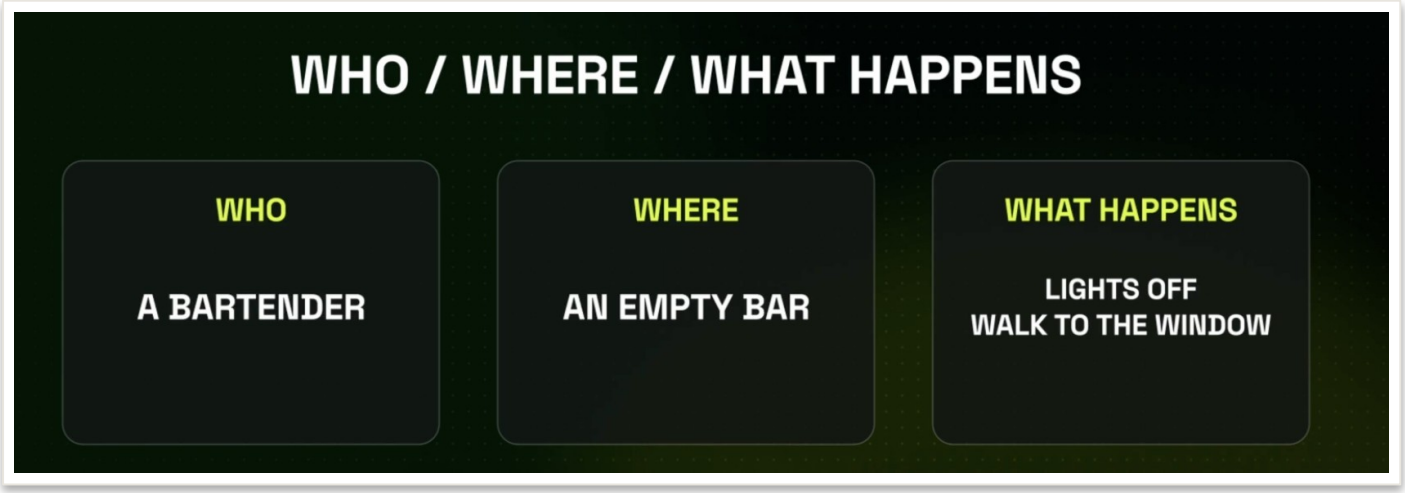

Both clips are 15 s Drafts in one project; your log names the character, world and camera the model chose and three concrete quality issues, and says which ones the interviewed take fixed.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Brief like a director: who, where, what happens

Three lines remove the three guesses the lazy prompt left to the model

WHO

One character with a job and a look: 'a bartender'.

WHERE

One location you could photograph: 'an empty bar'.

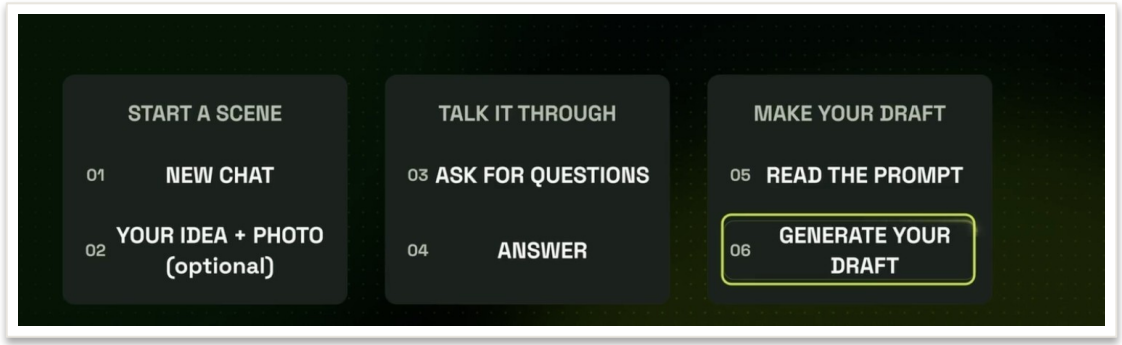

WHAT HAPPENS

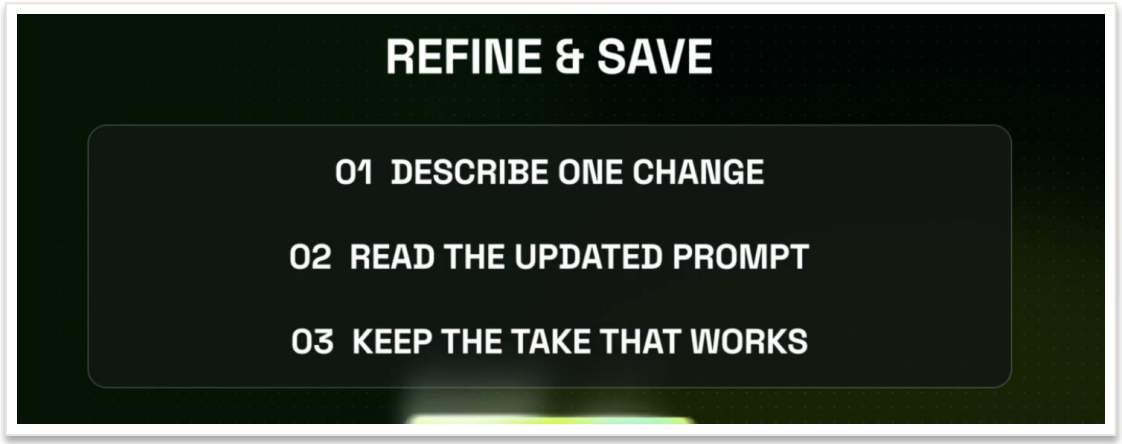

One visible action with an ending: 'lights off, walk to the window'.

© Tertiary Infotech Academy Pte Ltd

Talk the scene through, then refine one change at a time

The loop you will repeat in every lab from here on

Start → talk → draft

New chat, your idea (and a photo if you have one), let it ask questions, answer, read its prompt, generate the draft.

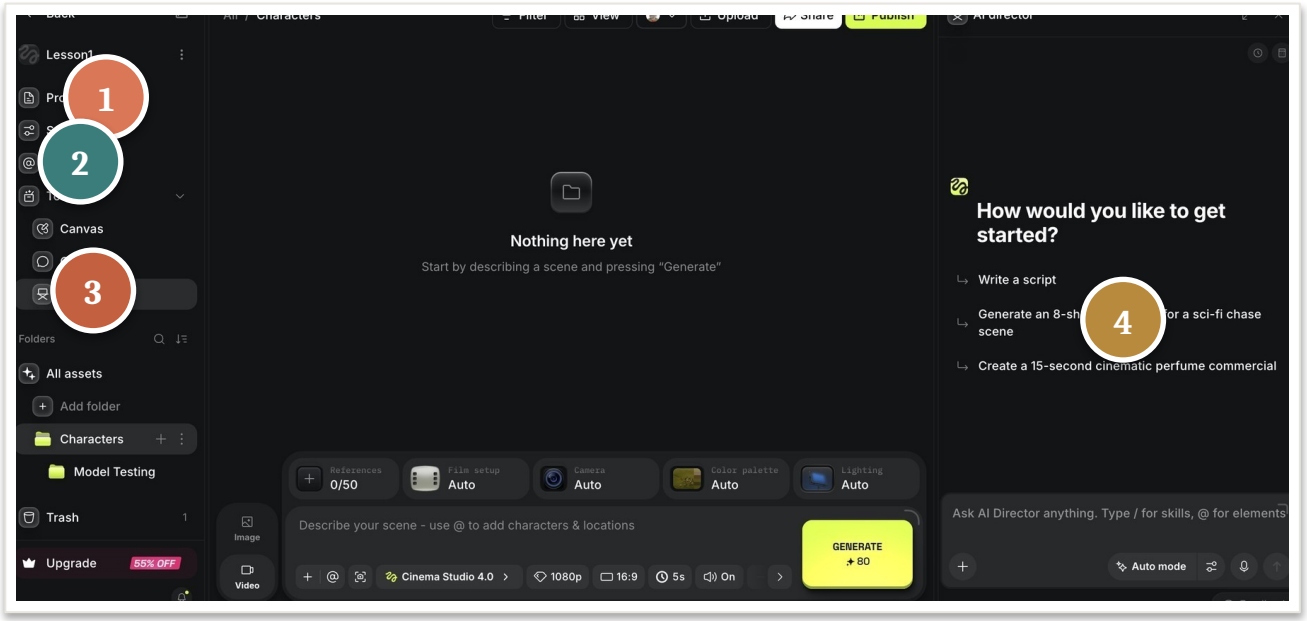

Refine & save

Describe ONE change, read the updated prompt, keep the take that works. One change per run tells you what fixed it.

© Tertiary Infotech Academy Pte Ltd

AI Director turns a brief into a script and storyboard

Your writers' room lives inside the project, next to the footage

1 Project brief

Where the locked script and shot list live.

2 Elements

The characters, locations and props this project can call.

3 AI Director

Opens the director chat inside the project.

4 Suggested starts

'Write a script', 'Generate an 8-shot storyboard', '15-second perfume commercial'.

© Tertiary Infotech Academy Pte Ltd

Good Story Elements

1. **Identifiable hero**
   A protagonist the audience recognises themselves in.
2. **A clear desire**
   What does the hero want? Ambiguity kills engagement.
3. **A real obstacle**
   No obstacle, no story: conflict is the heart of drama.
4. **Action & outcome**
   The hero acts; the world changes. Show the transformation.
5. **Resolution**
   End the story world in a new state, with your call to action.
6. **The story spine**
   Once upon a time… then one day… but… so… until finally…

© Tertiary Infotech Academy Pte Ltd

Build every prompt in three parts

1. **Scene context** — visible action, 1–2 sentences
2. **References** — @elements and their roles
3. **Shots** — numbered, timed, sized
4. **Sound** — ambience, foley, dialogue
5. **Settings** — model, ratio, length, Draft

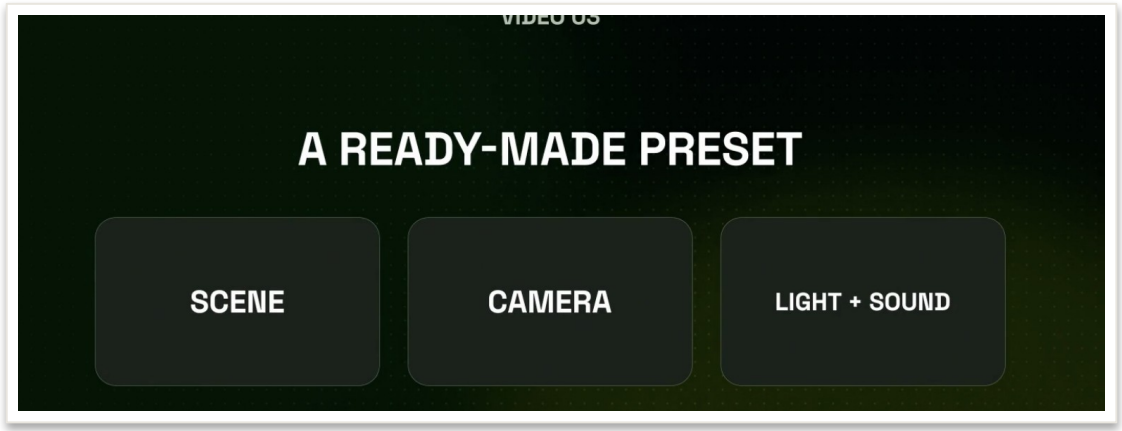

WRITE IT LIKE A CALL SHEET

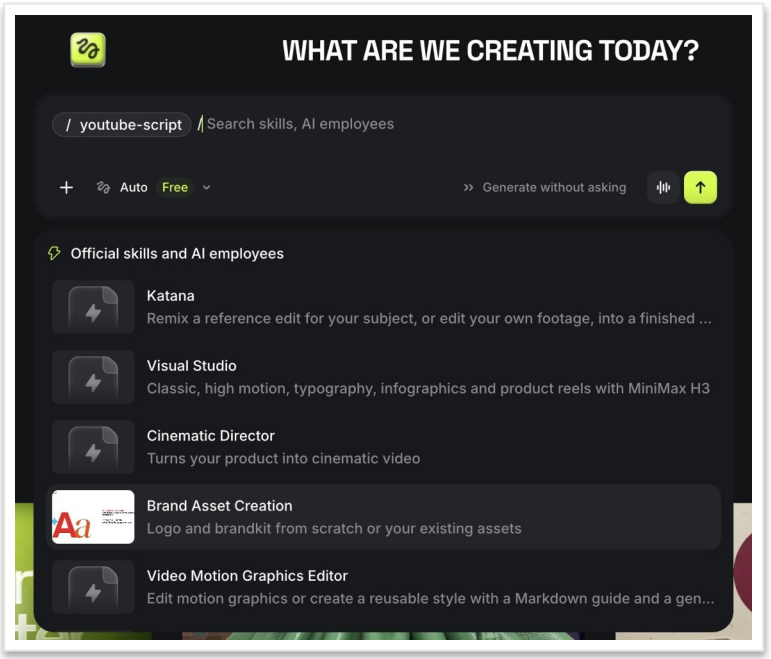

Every shot names a size, an action and a camera. The model stops guessing and starts following.

© Tertiary Infotech Academy Pte Ltd

Ready-made presets and skills do the heavy lifting

Lab 2 uses /youtube-script; Lab 9 uses /product-photoshoot

A preset packs scene, camera, light and sound

Pick one and the model receives a full brief. Good for speed; you still check it fits your story.

Skills: rules for a specific job

Type / in Supercomputer: Katana, Visual Studio, Cinematic Director, Brand Asset Creation, Video Motion Graphics Editor, /youtube-script.

© Tertiary Infotech Academy Pte Ltd

Add a skill to Supercomputer: three ways

1

Install from the Marketplace

Skills in the left sidebar → browse official and community skills → Install. Higgsfield calls Skills 'installable workflows'.

2

Import what you already have

Bring your skills and memory from Claude, Claude Code, Codex or ChatGPT (the import uses the Higgsfield MCP connection).

3

Create your own

A skill is rules + guidelines for one job: when to use it, the steps, the style rules, the output format.

4

Run it with a slash

Type / in the Supercomputer prompt and pick the skill: /youtube-script, /product-photoshoot, /house-standards.

© Tertiary Infotech Academy Pte Ltd

Write the Script and Shot List with Supercomputer and AI Director

LAB 2

MAPS TO review scripts to conceptualise the edits needed; edit video scripts with GenAI

Turn a three-line idea (who, where, what happens) into a 15-second script and a timed shot list. AI Director drafts it inside your project; you review it against the story elements and decide the edits: shot sizes, cuts, camera and sound. Then you refine it one change at a time.

You'll build

A reviewed 15-second script and a 6-shot shot list in the three-part prompt format, saved in your project brief.

Tools: Higgsfield: Projects, AI Director, Supercomputer (/youtube-script skill)

© Tertiary Infotech Academy Pte Ltd

How Lab 2 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 2 — Prompts (1/2)

PROMPT — BRIEF AI DIRECTOR — WHO / WHERE / WHAT HAPPENS

WHO: a bartender in her thirties, tired but proud of her bar.
WHERE: her empty neighbourhood bar after closing time.
WHAT HAPPENS: she switches the lights off one by one and walks to the window as the city lights come on.
Write a 15-second cinematic script, then a 6-shot storyboard with shot sizes and timings.

PROMPT — THREE-PART PROMPT SKELETON

Scene context: <the visible action in one or two sentences>.
References: <@element — role, 100% as shown in the reference image>.
Shots (cut between each):
1. 0–3s: <shot size>, <action>, <camera>.
2. 3–6s: …
Sound: <ambience>, <footsteps/clothing>, <dialogue or none>.

© Tertiary Infotech Academy Pte Ltd

Lab 2 — Prompts (2/2)

PROMPT — SCRIPT CRITIQUE

Act as a film editor. Check this script for: weak opening shot, unclear hero, no obstacle, no visual payoff, and shots that cannot be filmed in 15 seconds. List each issue, then rewrite only the weakest shot.

© Tertiary Infotech Academy Pte Ltd

Write the Script and Shot List with Supercomputer and AI Director

✓ Check your work

The script fits 15 s, every shot has a size, a camera instruction and a time, the story-elements review names at least two edits you made, and the prompt is in the three-part format.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Tailoring the cut to the platform

	YouTube	TikTok / Shorts	Instagram Reels
Length	60 s – 10 min	15 – 60 s	15 – 90 s
Ratio	16:9 landscape	9:16 vertical	9:16 vertical
Pacing	Build with structure	Hook in 1–3 s, fast cuts	Aesthetic-first, fast
Captions	Recommended	Essential (muted viewing)	Essential
AI label	Disclose realistic AI content	AI-generated label	Label AI content

TIP: Higgsfield's Reframe turns a 16:9 take into 9:16; plan the safe area when you write the shots.

© Tertiary Infotech Academy Pte Ltd

Draft first: the cheapest quality gate you have

Read on Higgsfield, 9 Nov 2026: put these numbers in your Lab 3 work plan

45

credits

a 15 s Seedance 2.5 Draft at 480p

240

credits

the same 15 s at 1080p, 5× the price

7

days

to finalise any Draft you keep at 1080p

Rule for every lab: test the idea on Draft, finalise only the take you would show a client.

© Tertiary Infotech Academy Pte Ltd

Turn your standards sheet into a skill

Part of the skill	What you write	Example: /house-standards
Name	short, lower-case, hyphenated	house-standards
When to use	the job it does	Every video for our agency's clients
Rules	the non-negotiables	Saved Elements only; 1080p finals; AI label on; no real likeness without consent
Steps	the order of work	Draft 480p → review → finalise 1080p → checklist → export 16:9 + 9:16
Output format	what it must hand back	Prompt in three parts + a credit estimate + a pass/fail checklist

TIP: A skill turns a one-off standards document into a rule the agent follows on every job: your standards become enforced, not just written.

© Tertiary Infotech Academy Pte Ltd

Set the House Rules: Standards, Work Plan and Credit Budget

LAB 3

MAPS TO quality issues to prevent; develop editing standards and guidelines; develop work plans and timelines

Have Supercomputer draft the two documents every Higgsfield production needs: a one-page standards and guidelines sheet (platform specs, legal and AI-disclosure rules, quality gates) and a post-production work plan with timelines and a credit budget built on real Draft and 1080p costs.

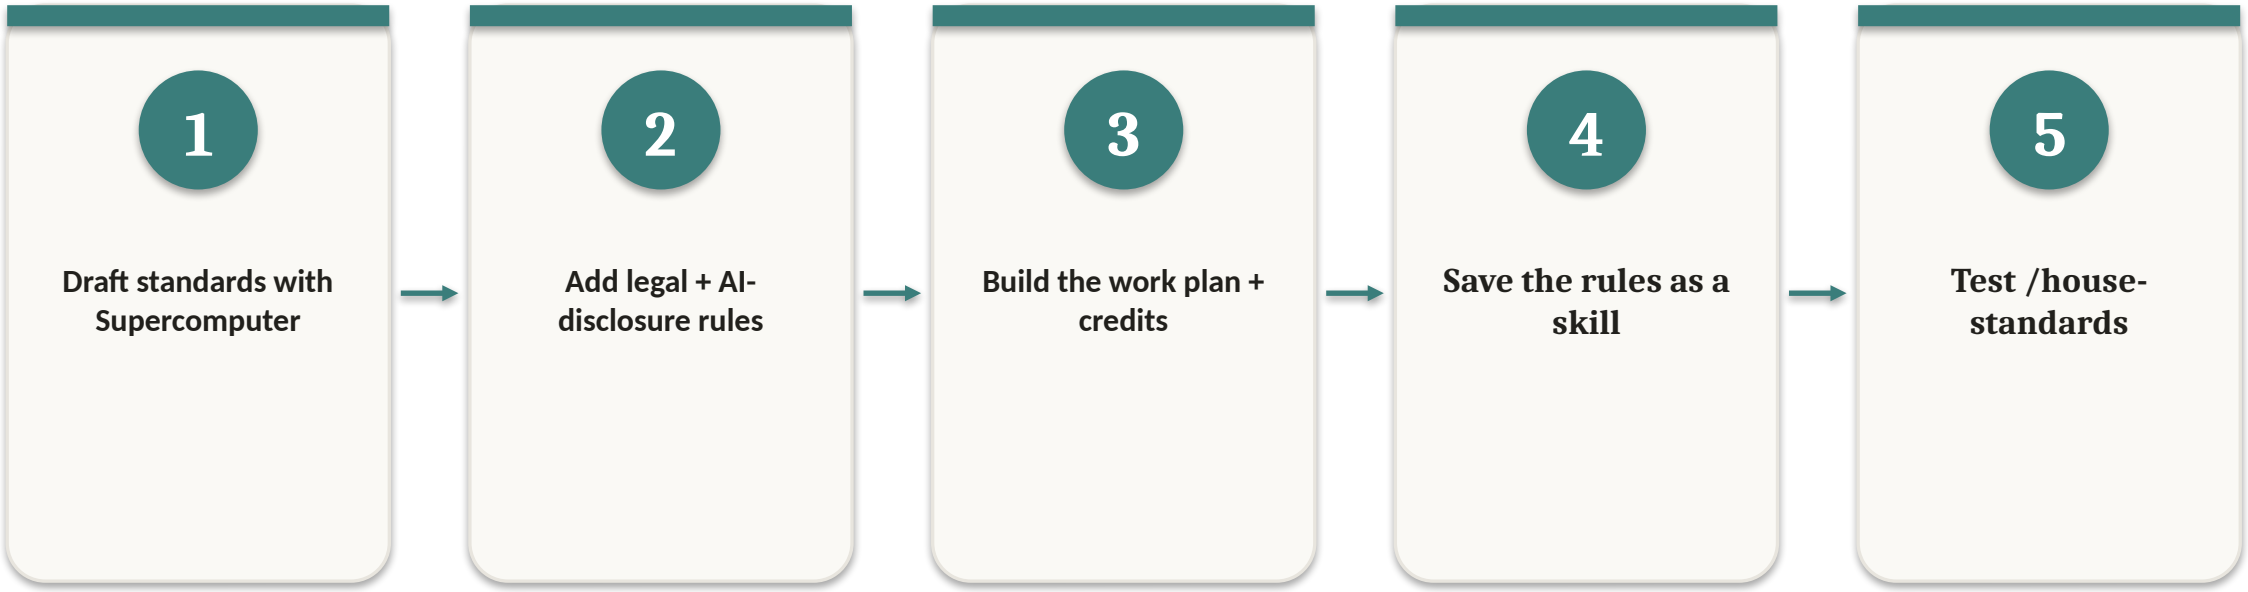

You'll build

A one-page standards & guidelines sheet, a phased work plan with timelines and a credit budget, and your own /house-standards skill.

Tools: Higgsfield: Supercomputer (Ask mode, Skills)

© Tertiary Infotech Academy Pte Ltd

How Lab 3 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 3 — Prompts (1/3)

PROMPT — STANDARDS & GUIDELINES SHEET

Draft a one-page video standards & guidelines sheet for a Singapore agency making 15–30 second AI videos in Higgsfield.
Cover: resolution and frame rate; aspect ratio per platform (YouTube 16:9, TikTok/Reels/Shorts 9:16); audio level and captions; branding; character and location consistency (saved Elements only); commercial-use rights on our plan;
PDPA consent for real faces and voices; AI-content disclosure labels on TikTok and YouTube; IMDA/ASAS advertising codes.
Format as a table.

© Tertiary Infotech Academy Pte Ltd

Lab 3 — Prompts (2/3)

PROMPT — WORK PLAN WITH TIMELINES AND CREDITS

Create a post-production work plan for a 15-second promo due in 3 working days, made entirely in Higgsfield.
Phases: script lock, Elements (characters, locations, props), 480p Draft takes, 1080p finals, fix & finish (replace, upscale, captions, music), client review, export 16:9 + 9:16, publish.
For each phase give owner, duration, dependency, deliverable and credits (45 per 15 s Draft, 240 per 15 s 1080p final, max three Drafts per shot). Format as a timeline table with a credit total.

© Tertiary Infotech Academy Pte Ltd

Lab 3 — Prompts (3/3)

PROMPT — SAVE THE RULES AS A SKILL

Save these standards as a reusable skill named house-standards.
When to use: every video we make for clients.
Rules: saved Elements only; Draft at 480p before any 1080p final; 1080p finals; 16:9 and 9:16 exports;
AI-generated label on; no real person's face or voice without written consent; music cleared for commercial use.
Steps: brief -> three-part prompt -> Draft -> review -> finalise -> quality checklist -> export.
Output: the three-part prompt, a credit estimate and a pass/fail checklist.

© Tertiary Infotech Academy Pte Ltd

Set the House Rules: Standards, Work Plan and Credit Budget

✓ Check your work

The sheet names concrete specs per platform and at least three legal or disclosure rules; the plan covers every phase to publishing within 3 days and its credit total matches 45/240 rates; /house-standards answers a test idea with your rules applied.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Recap — Create and Edit Video Script Using Generative AI (GAI)

1

Lab 1 — Sign Up and Make Your First 15-Second Video

You built: Two 15-second Draft clips of the same idea, plus a log of what the model decided and three quality issues you spotted.

2

Lab 2 — Write the Script and Shot List with Supercomputer and AI Director

You built: A reviewed 15-second script and a 6-shot shot list in the three-part prompt format, saved in your project brief.

3

Lab 3 — Set the House Rules: Standards, Work Plan and Credit Budget

You built: A one-page standards & guidelines sheet, a phased work plan with timelines and a credit budget, and your own /house-standards skill.

© Tertiary Infotech Academy Pte Ltd

TOPIC 2

Improve Video Footage on GAI Powered Video Platforms

Elements: characters, locations, props · references · Cinema Studio shots & takes · Draft mode · assess the cut

1. Lab 4 — Build Your Elements: Characters, Locations and Props
2. Lab 5 — Direct Shots and Takes in Cinema Studio
3. Lab 6 — Cut, Caption and Assess the Scene

© Tertiary Infotech Academy Pte Ltd

Key Concepts — Topic 2

1

Elements

Save a character, location or prop once with an @handle and reuse it in every shot: the fix for drifting faces and sets.

2

References

Up to 50 per generation (30 images, 10 videos, 10 audio), each given a role: character, location, camera move or voice.

3

Shots & takes

One continuous shot or multishot with cuts; each run is a take you keep, compare or replace.

4

Cinematic controls

Camera body, lens, aperture, movement, lighting, colour palette, genre, era and tempo.

5

Draft mode

Seedance 2.5 Draft renders 480p for 45 credits; finalise only the take that works at 1080p.

6

Assessing footage

Resolution, continuity, motion, audio, pacing and compliance, judged take by take.

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Topic 2

4

Lab 4 — Build Your Elements: Characters, Locations and Props

Five saved Elements, two characters, two locations and one prop, each with a reference image and an @handle.

5

Lab 5 — Direct Shots and Takes in Cinema Studio

Four Draft takes of one scene and one 1080p final of the best take, made from your Elements.

6

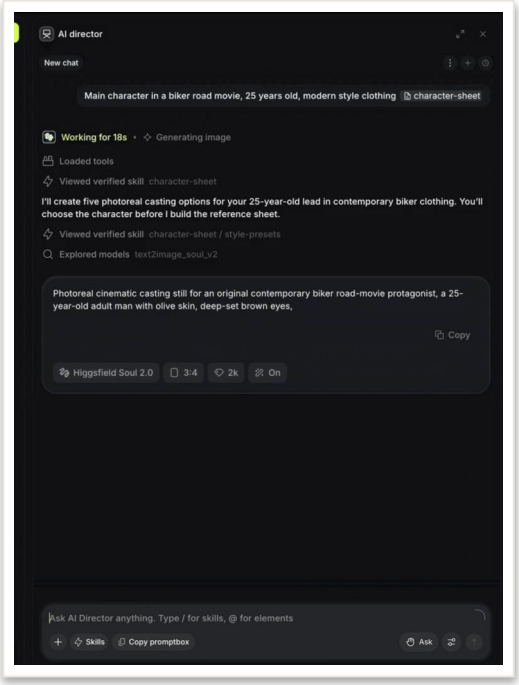

Lab 6 — Cut, Caption and Assess the Scene

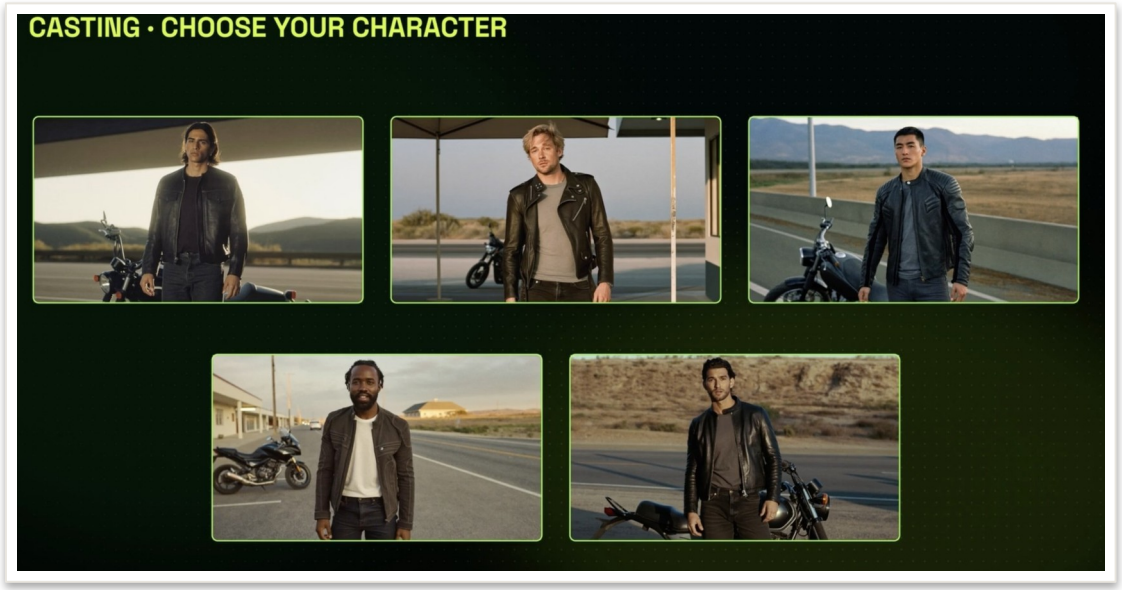

A captioned 15–30 s cut in 16:9 and 9:16 with a scored quality checklist and a list of storytelling improvements.

© Tertiary Infotech Academy Pte Ltd

Cast your lead before you shoot a frame

A cast you chose on purpose beats a face the model invents every take

Ask Supercomputer to cast

'Main character in a biker road movie, 25, modern clothing'. It loads the character-sheet skill and writes a casting prompt for Soul 2.0.

Choose from five options

Five photoreal candidates. You pick one; only then does it build the reference sheet.

© Tertiary Infotech Academy Pte Ltd

One sheet, three views: the reference every shot obeys

Plain background, consistent light: the model copies exactly what it sees

Full body, front

Clothes, shoes, proportions.

Full body, back

What the camera sees when he walks away.

Face portrait

The identity every shot copies. Next: make it the only face on the sheet.

© Tertiary Infotech Academy Pte Ltd

Cover one face, keep one face: the trick that locks identity

Two faces on one sheet means two identities to blend; leave the model only one

Blank the full-body face

The white oval is deliberate. The small, soft face in the full-body view is hidden, so the model copies the sharp close-up into every shot.

Same trick for the friend

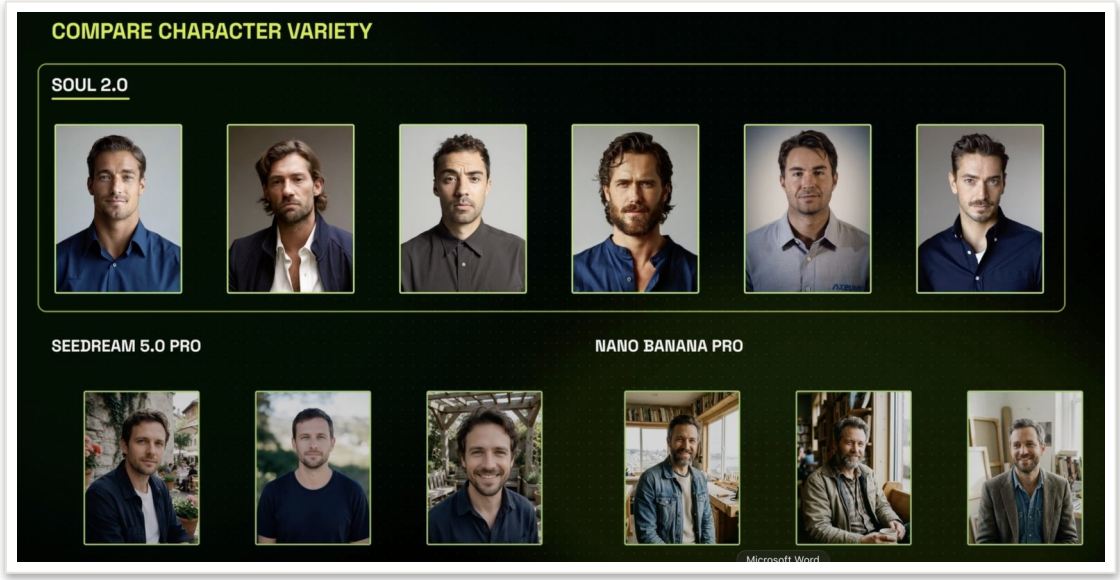

His full-body face is covered too. Each character has exactly one face to copy, so two people share a shot without swapping faces.

© Tertiary Infotech Academy Pte Ltd

Edit one detail and keep it in every view

Fix wardrobe on the sheet, not shot by shot

A targeted edit

'Give him a silver wallet chain… white ribbed tank top, same in all views.' Seedream 5.0 Pro, 3 credits.

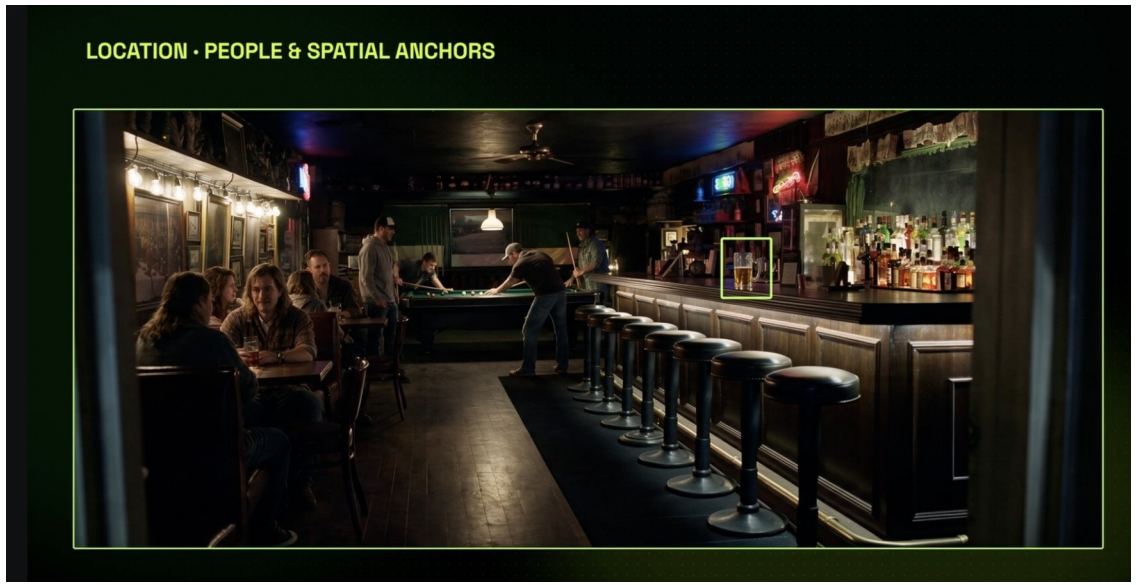

Different models, different casts

Soul 2.0, Seedream 5.0 Pro and Nano Banana Pro each read the same brief their own way.

© Tertiary Infotech Academy Pte Ltd

Build locations with anchors you can name in a shot

'He sits on the third stool' only works if the stool exists in the reference

Spatial anchors

The counter, the stools, the pool table, the window: things a shot can point at.

People optional

Extras give scale; your saved characters will replace them.

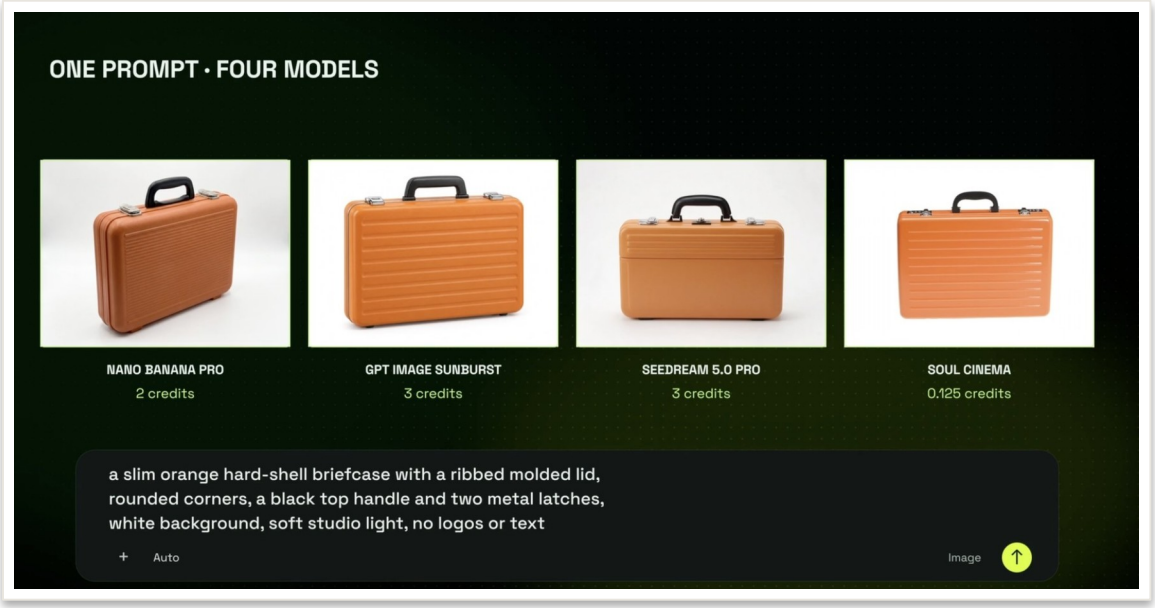

Save it

loc_bar-interior becomes @loc_bar-interior in every prompt.

© Tertiary Infotech Academy Pte Ltd

A prop on four models: compare before you commit

The cheapest image is not always the cheapest choice: a wrong prop costs a re-shoot

Same prompt

A slim orange hard-shell briefcase, white background, no logos.

Different cost

Nano Banana Pro 2 credits, GPT Image Sunburst 3, Seedream 5.0 Pro 3, Soul Cinema 0.125.

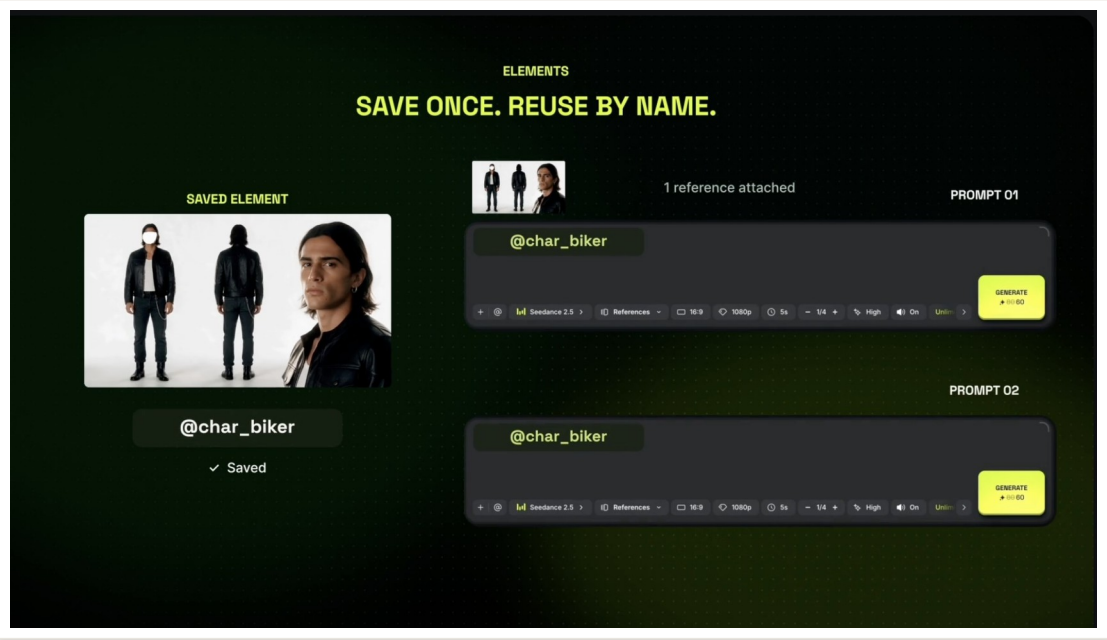

Pick on fit

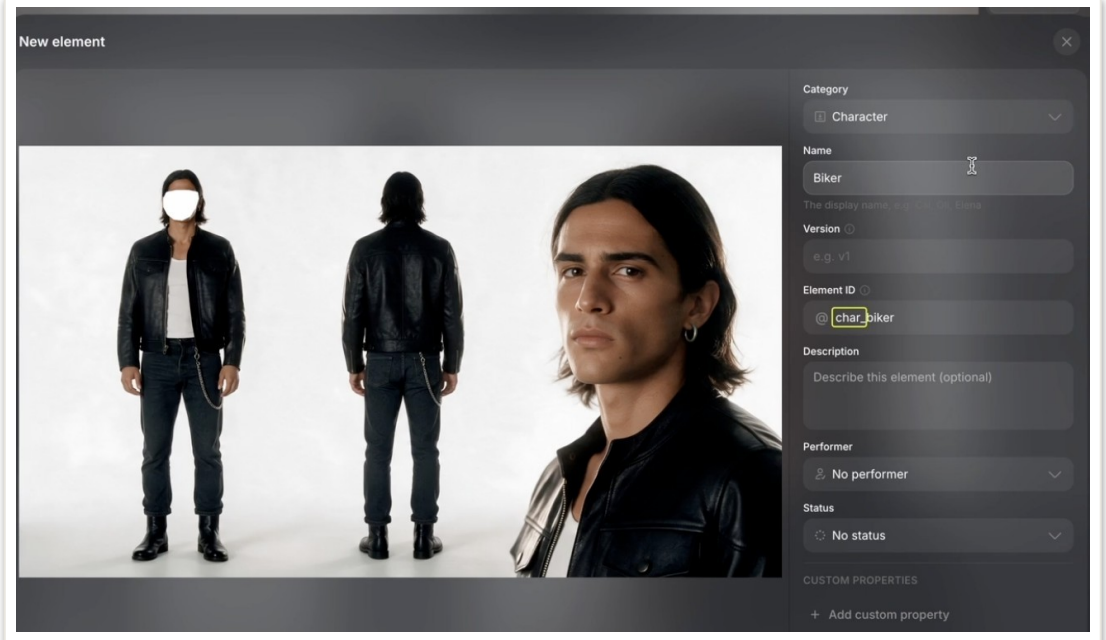

Shape, colour and detail that survive a close-up.

© Tertiary Infotech Academy Pte Ltd

Save once, reuse by name

Naming rule: char_, loc_, prop_ + a short slug, so the whole crew finds it

@char_biker in every prompt

One saved Element, one reference attached automatically, prompt after prompt.

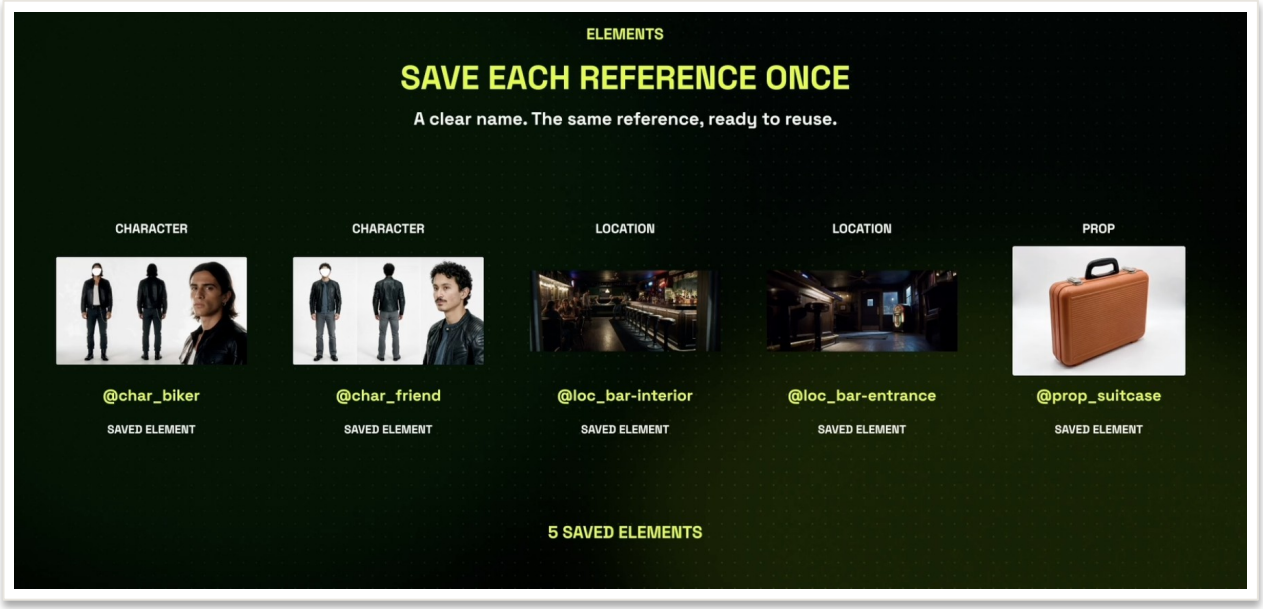

The Element form

Category (Character, Location, Prop), Name, Element ID such as char_biker, description and custom properties.

© Tertiary Infotech Academy Pte Ltd

Five saved Elements: your cast, sets and props

What your My elements page should show at the end of the Elements lab

Characters
@char_biker, @char_friend

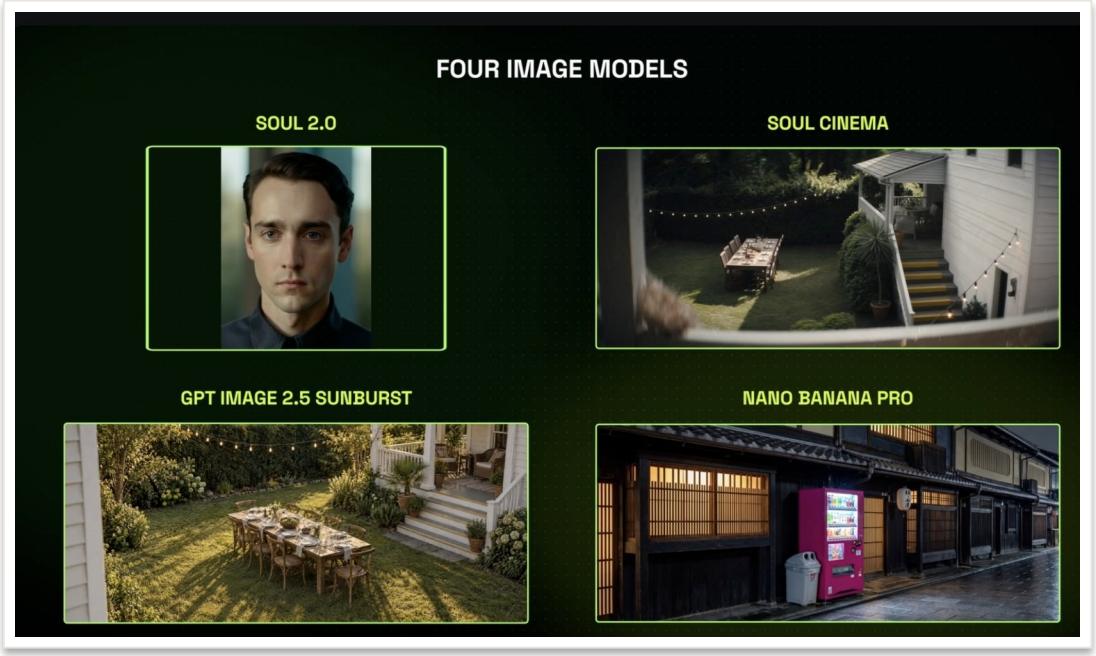

Locations
@loc_bar-interior, @loc_bar-entrance

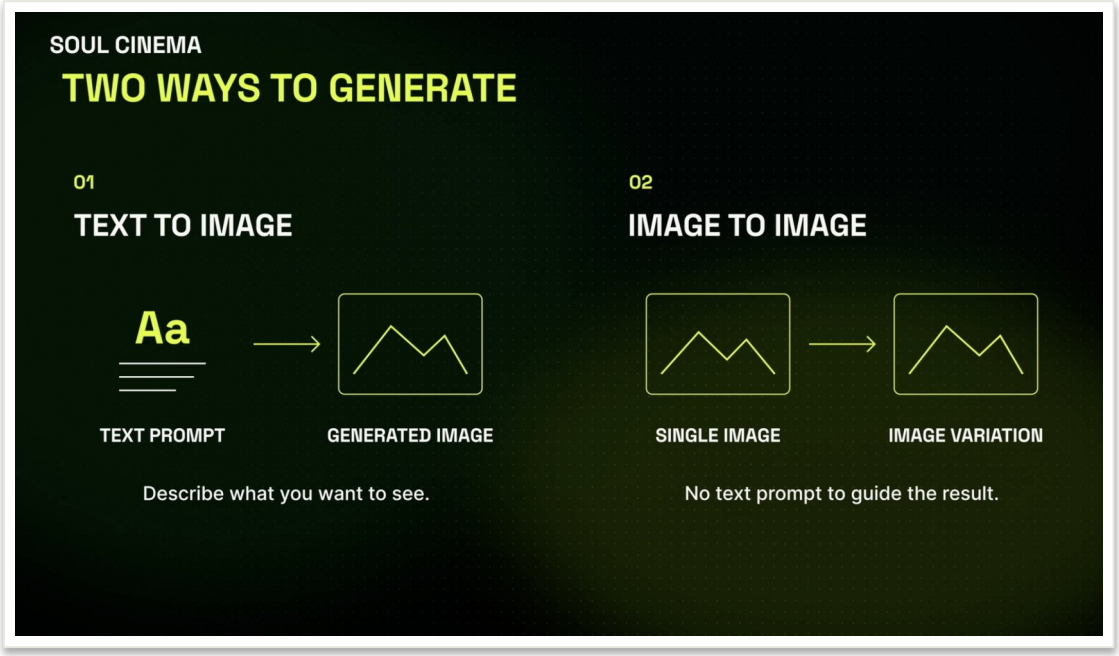

Prop
@prop_suitcase, ready for every shot

© Tertiary Infotech Academy Pte Ltd

Pick the image model for the job

Elements start as images, so the image model decides the look of your film

Four image models

Soul 2.0 for people, Soul Cinema for film stills, GPT Image Sunburst for scenes, Nano Banana Pro for detailed places.

Two ways to generate

Text to image from a prompt, or image to image from a single picture to make variations.

© Tertiary Infotech Academy Pte Ltd

Tested for this course: the Elements prompts work as written

Name what the shot must contain and the image model delivers it

Location prompt → the bar

Counter on the right, eight stools, pool table at the back, window on the left: every spatial anchor the prompt named. About 2 credits.

Prop prompt → the case

Slim orange ribbed lid, black handle, two metal latches, white background, no logos. About 2 credits.

© Tertiary Infotech Academy Pte Ltd

Build Your Elements: Characters, Locations and Props

LAB 4

MAPS TO solutions that rectify quality issues (consistency); review footage for improvement

Faces that change between shots are the commonest AI video defect. Fix it before you shoot: cast a character with Supercomputer, turn the pick into a reference sheet, build a location and a prop, and save each one as an Element with an @handle you can call in any prompt.

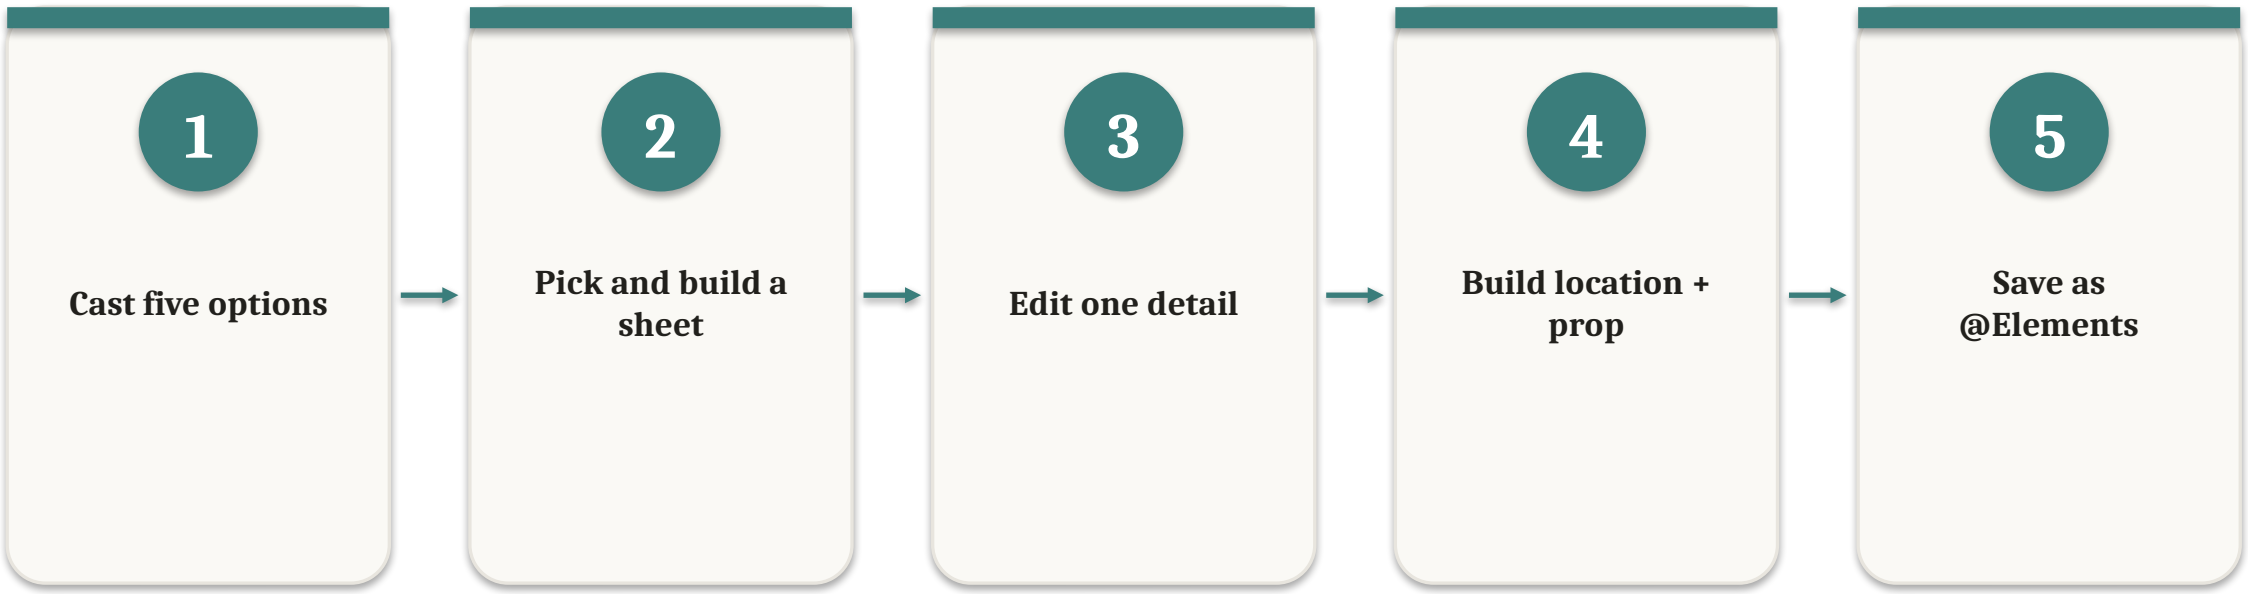

You'll build

Five saved Elements, two characters, two locations and one prop, each with a reference image and an @handle.

Tools: Higgsfield: Supercomputer (character-sheet skill), Soul 2.0, Seedream 5.0 Pro, Nano Banana Pro, Elements

© Tertiary Infotech Academy Pte Ltd

How Lab 4 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 4 — Prompts (1/2)

PROMPT — CAST A CHARACTER (SUPERCOMPUTER)

Main character in a biker road movie, 25 years old, modern style clothing.
Use the character-sheet skill. Show me five photoreal casting options first; I will pick one before you build the reference sheet.

PROMPT — EDIT ONE DETAIL, KEEP IT CONSISTENT

Give him a silver wallet chain hanging off his jeans pocket. Replace the black t-shirt with a plain white ribbed cotton tank top, same tank top in all views.

© Tertiary Infotech Academy Pte Ltd

Lab 4 — Prompts (2/2)

PROMPT — LOCATION WITH SPATIAL ANCHORS

Wide interior of a dim neighbourhood bar at night: long wooden counter on the right with eight black stools, beer taps and backlit bottles, a pool table at the back, warm practical lamps, one large window on the left wall. Photoreal, 16:9, no people.

PROMPT — PROP (RUN ON TWO MODELS)

A slim orange hard-shell briefcase with a ribbed moulded lid, rounded corners, a black top handle and two metal latches, white background, soft studio light, no logos or text.

© Tertiary Infotech Academy Pte Ltd

Build Your Elements: Characters, Locations and Props

✓ Check your work

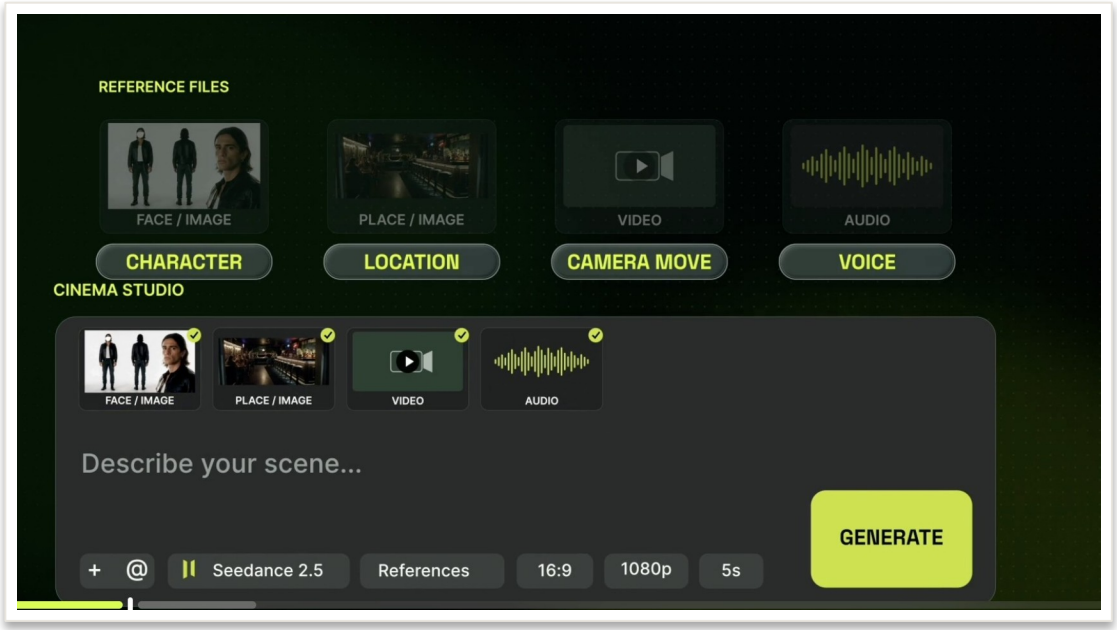

Five Elements are saved with char_/loc_/prop_ handles; the character sheet shows the same outfit in all three views, the full-body face is covered and the portrait is the one clear face; each Element has a line saying which quality issue it prevents.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Each reference gets a job: character, location, camera, voice

A reference without a role is a suggestion; with a role it is an instruction

Face / image → Character

Who appears, exactly as shown.

Place / image → Location · video → Camera move

Where it happens, and how the camera travels.

Audio → Voice

What the character sounds like.

© Tertiary Infotech Academy Pte Ltd

Up to fifty references in one generation

More references, fewer guesses

30

images

faces, outfits, products, places

10

videos

camera moves and motion to copy

10

audio files

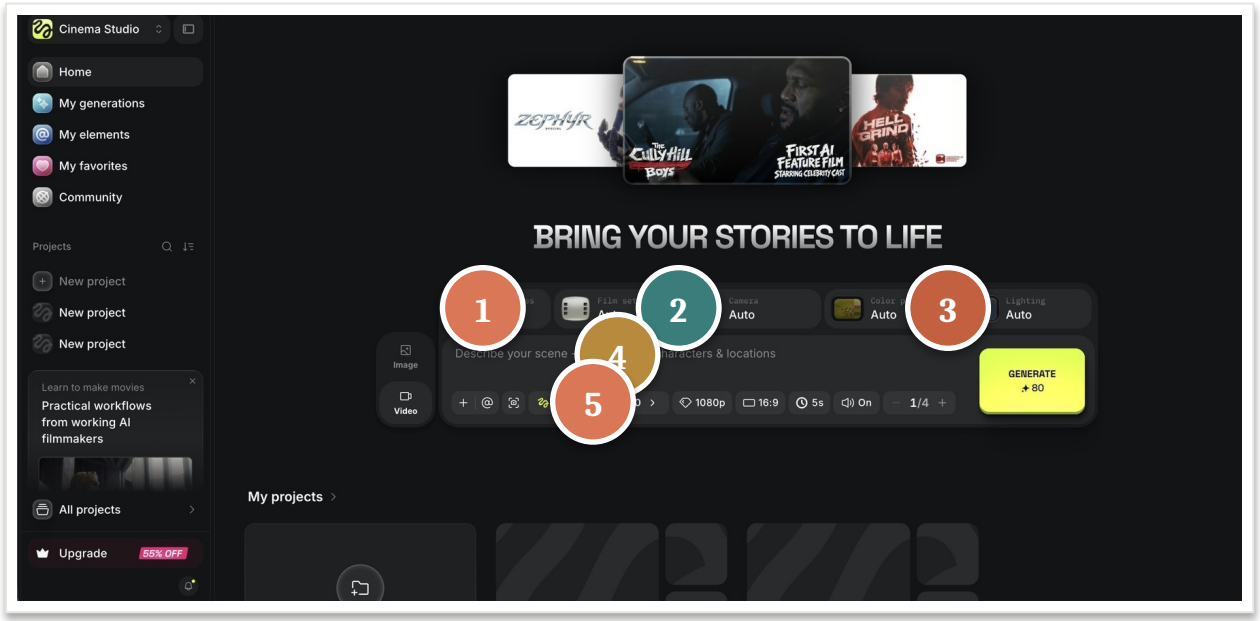

voices, music, sound to match

What each image carries: a person = face + clothes; a prop = shape + colour + details; a place = space + light + colour.

© Tertiary Infotech Academy Pte Ltd

Cinema Studio: every control a film crew has

Set the look once, then every take inherits it

1 References 0/50

Attach Elements, images, video and audio.

2 Film setup · Camera

Camera body, lens and aperture.

3 Colour palette · Lighting

The grade and the light scheme.

4 Describe your scene

Type @ to drop in a saved character or location.

5 Model and settings

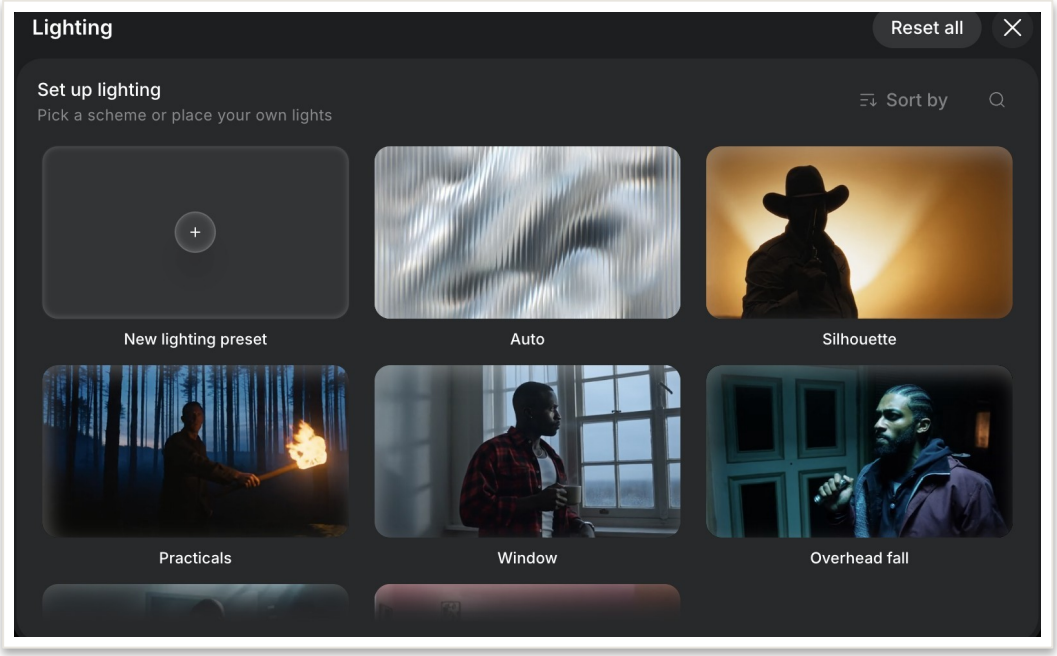

Cinema Studio 4.0, 1080p, 16:9, 5 s, sound, 1–4 takes; 80 credits.

© Tertiary Infotech Academy Pte Ltd

Set the camera and the light like a DP

Shallow focus and practical lamps make the bar feel real at night

Camera, lens, aperture, movement

DV Camcorder to Modern; Halation Vintage to Clean Sharp; f/11 deep focus to f/1.4 wide open.

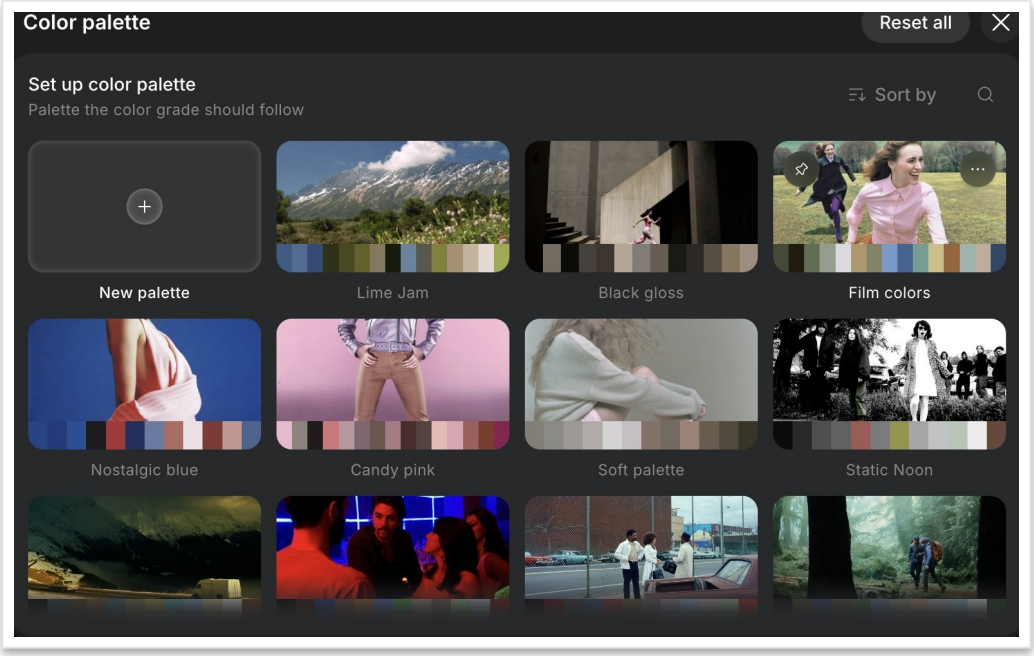

Lighting presets

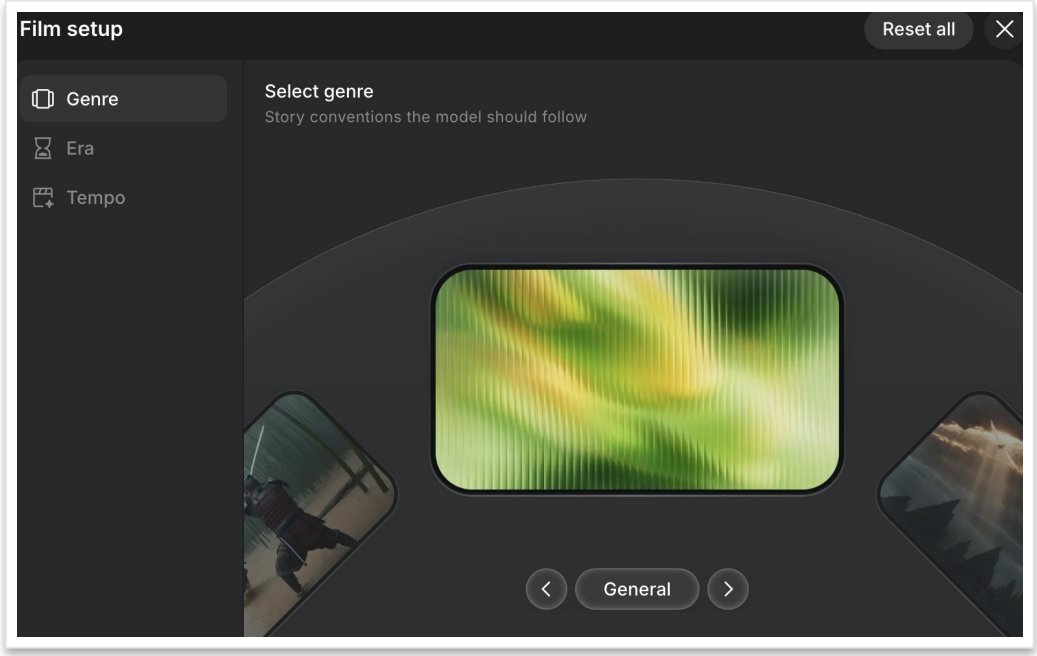

Auto, Silhouette, Practicals, Window, Overhead fall, or place your own lights.

© Tertiary Infotech Academy Pte Ltd

Grade the colour and set the genre

A grade and a genre tell the model the mood in two clicks

Colour palette

Lime Jam, Black gloss, Film colors, Nostalgic blue, Candy pink, Soft palette, Static Noon, or build your own.

Genre, era, tempo

The story conventions the model should follow, the period, and the cutting pace.

© Tertiary Infotech Academy Pte Ltd

One continuous shot or a multishot with cuts

Decide the structure before the words: it changes every line you write

One continuous shot

'Follow a man along a busy sidewalk… frontal view at the corner… no cuts.' Good for immersion.

Multishot · cuts

'15 seconds, six shots, a cut between each': feet, hand, pedestrian pass, profile, kerb, corner.

Seedance range

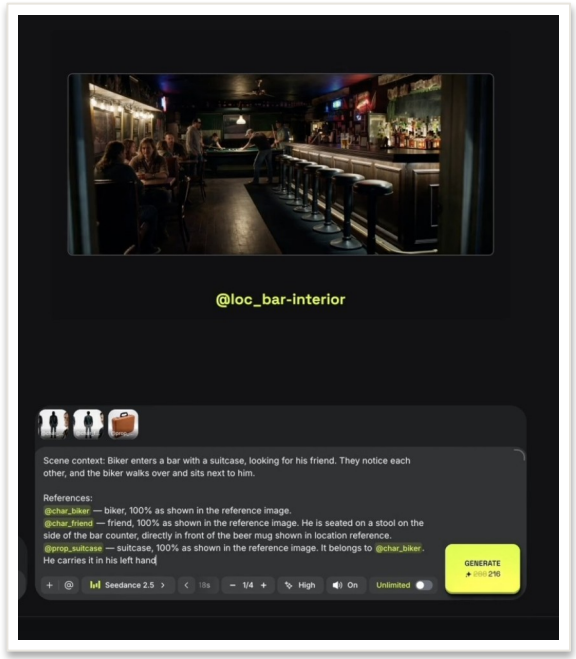

4–30 seconds per generation; you choose the structure in the prompt.

© Tertiary Infotech Academy Pte Ltd

Write the three parts, then attach the references

Lab 5 gives you this exact bar-scene prompt to adapt

Context, references, shots

01 scene context in 1–2 sentences; 02 references and their roles; 03 the shots that describe the action.

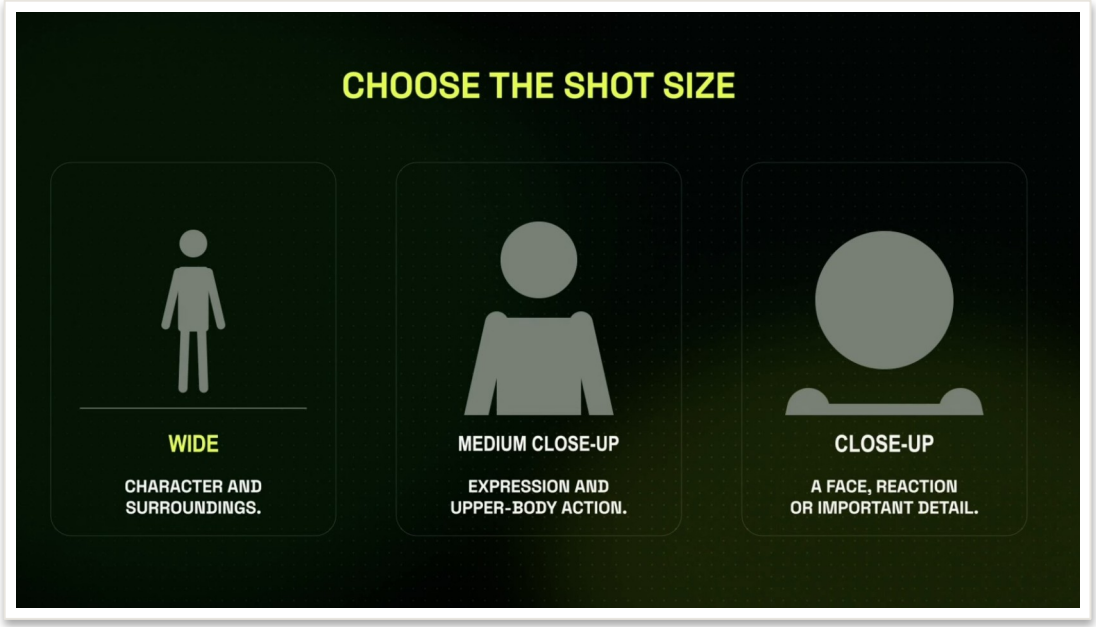

A real prompt with @handles

@char_biker, @char_friend and @prop_suitcase each '100% as shown', with who holds what and where they sit.

© Tertiary Infotech Academy Pte Ltd

Choose the shot size for what the audience must read

Every numbered shot in your prompt starts with one of these three words

Wide

Character and surroundings: where are we?

Medium close-up

Expression and upper-body action: what are they doing?

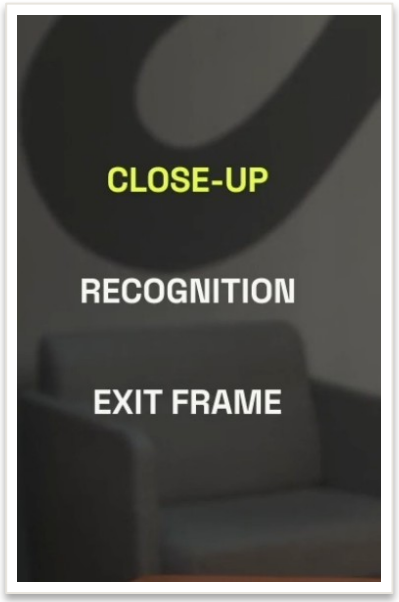

Close-up

A face, a reaction or an important detail: what do they feel?

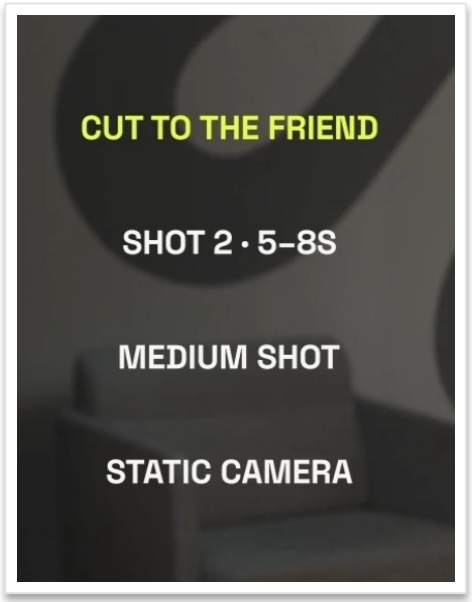

© Tertiary Infotech Academy Pte Ltd

Write each shot as size + purpose + camera

Three shot cards from the bar scene: copy the pattern into your shot list

CLOSE-UP · recognition, exit frame

CUT TO THE FRIEND · shot 2, 5–8 s, medium, static

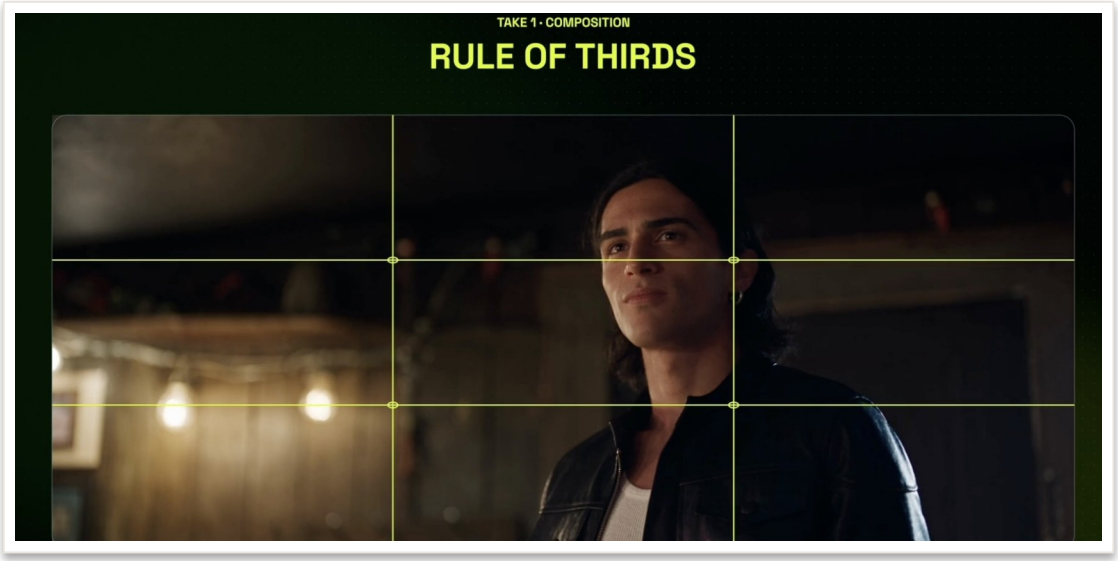

BEHIND THE COUNTER · left hand, dialogue in the action

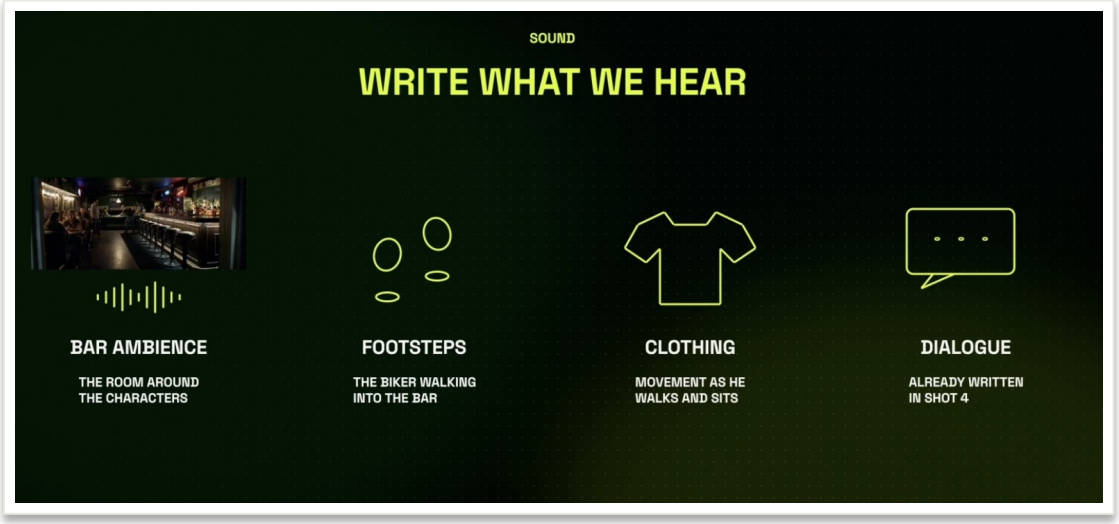

Pattern: SHOT n · time · size · camera · action · the line or sound that lands in it.

© Tertiary Infotech Academy Pte Ltd

Compose the frame, then write what we hear

Two lines in the prompt that separate a clip from a scene

Rule of thirds

Eyes on the upper third, the subject off-centre, space in the direction he looks.

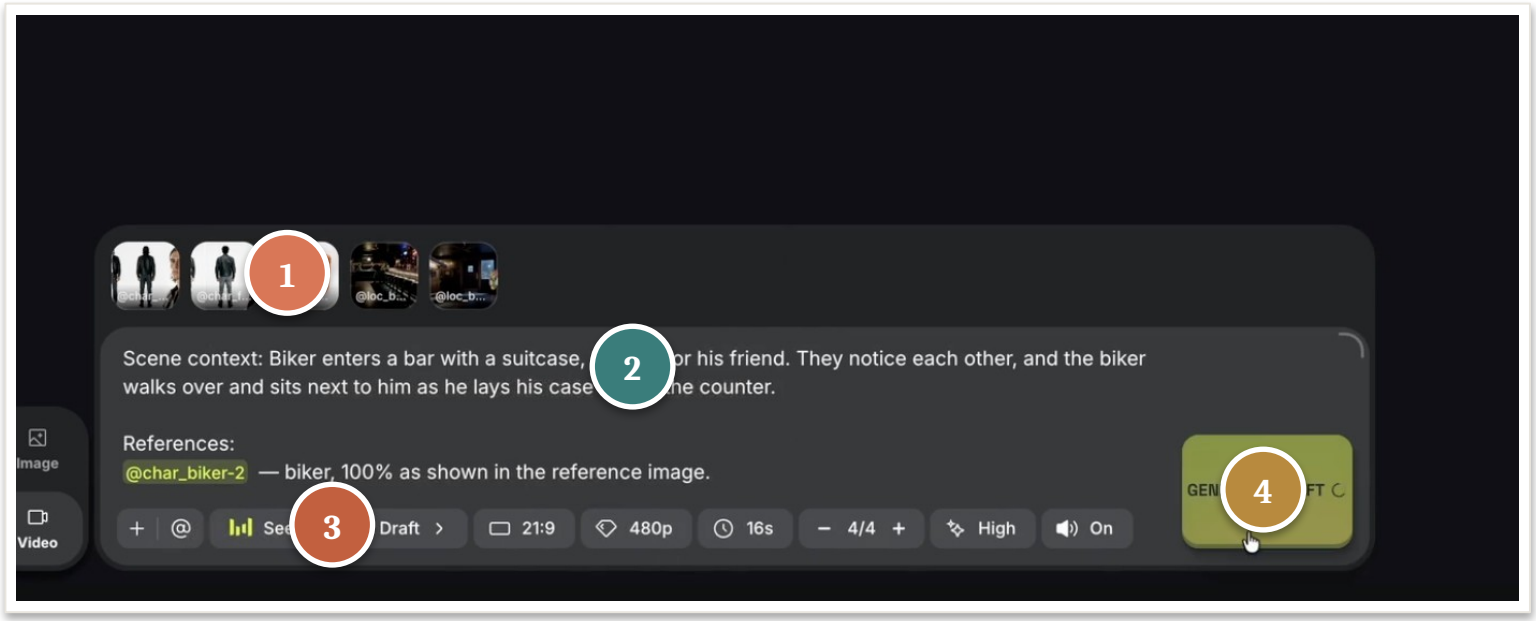

Sound is part of the prompt

Bar ambience, footsteps, clothing movement, dialogue already written in shot 4. Seedance renders it with the picture.

© Tertiary Infotech Academy Pte Ltd

Draft mode: four test takes for the price of one final

Explore at 480p, commit at 1080p

1 References attached

Characters, prop and both bar locations.

2 Three-part prompt

Scene context, references with roles, shots.

3 Seedance 2.5 Draft

480p, 21:9, 16 s, 4 takes, sound on.

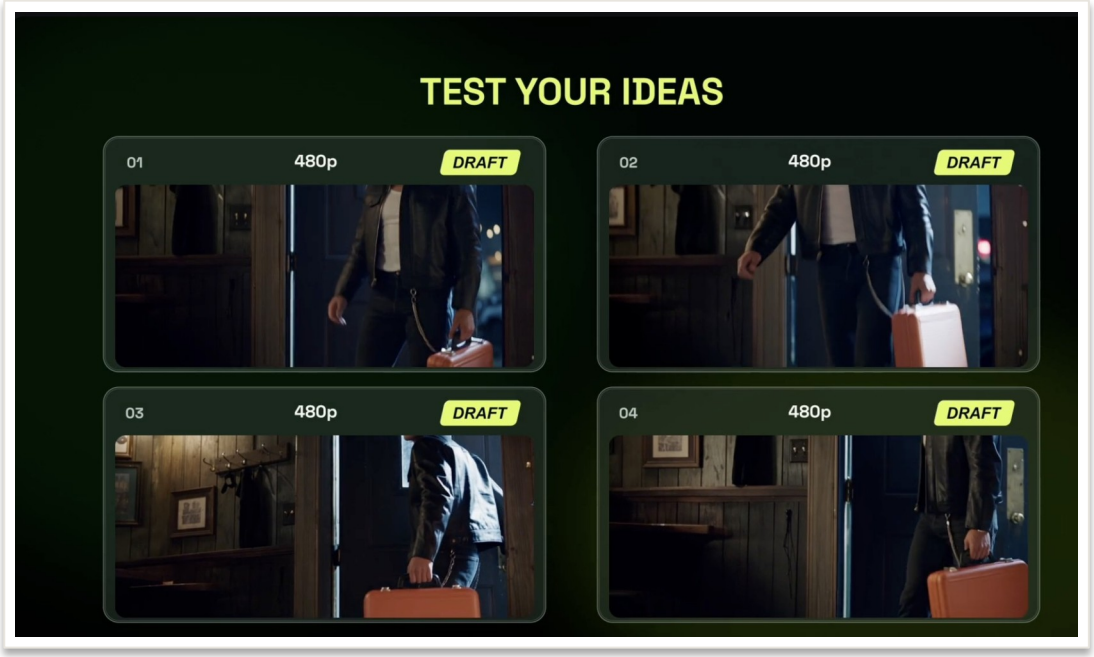

4 Generate Draft

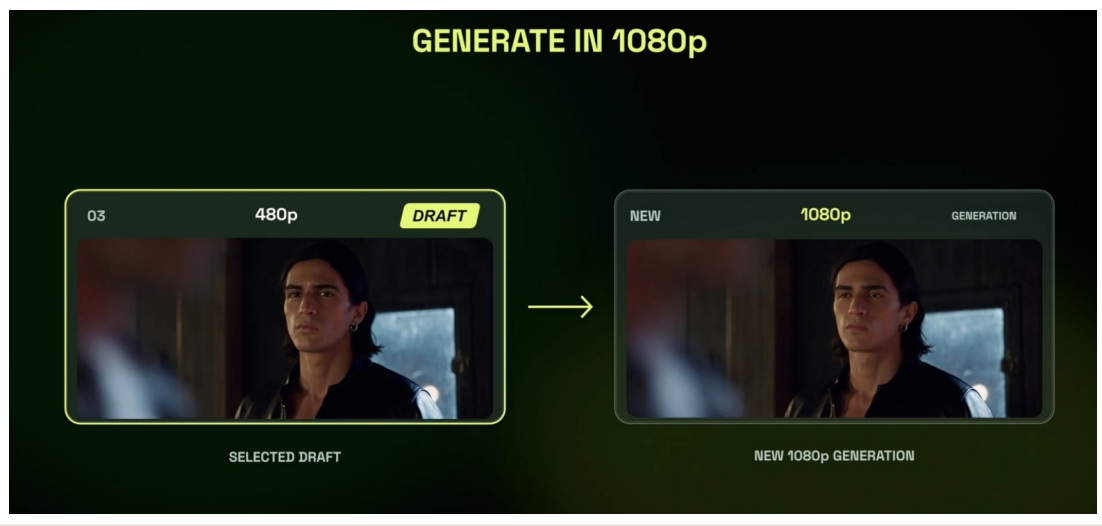

About 45 credits a take for 15 s; review before you spend more.

© Tertiary Infotech Academy Pte Ltd

Test four ideas, finalise one

Drafts can be finalised within seven days

Four 480p Drafts

Same prompt, four takes. Compare the walk, the case and the light.

Generate the keeper in 1080p

The selected Draft is re-rendered at full resolution: same take, full quality.

© Tertiary Infotech Academy Pte Ltd

Direct Shots and Takes in Cinema Studio

LAB 5

MAPS TO review footage to improve storytelling; solutions to rectify quality issues

Direct a 15-second bar scene the way a film crew would: attach your Elements as references with roles, set camera, lens, lighting and colour, write the shots and the sound, then render four 480p Draft takes. Finalise only the best take in 1080p.

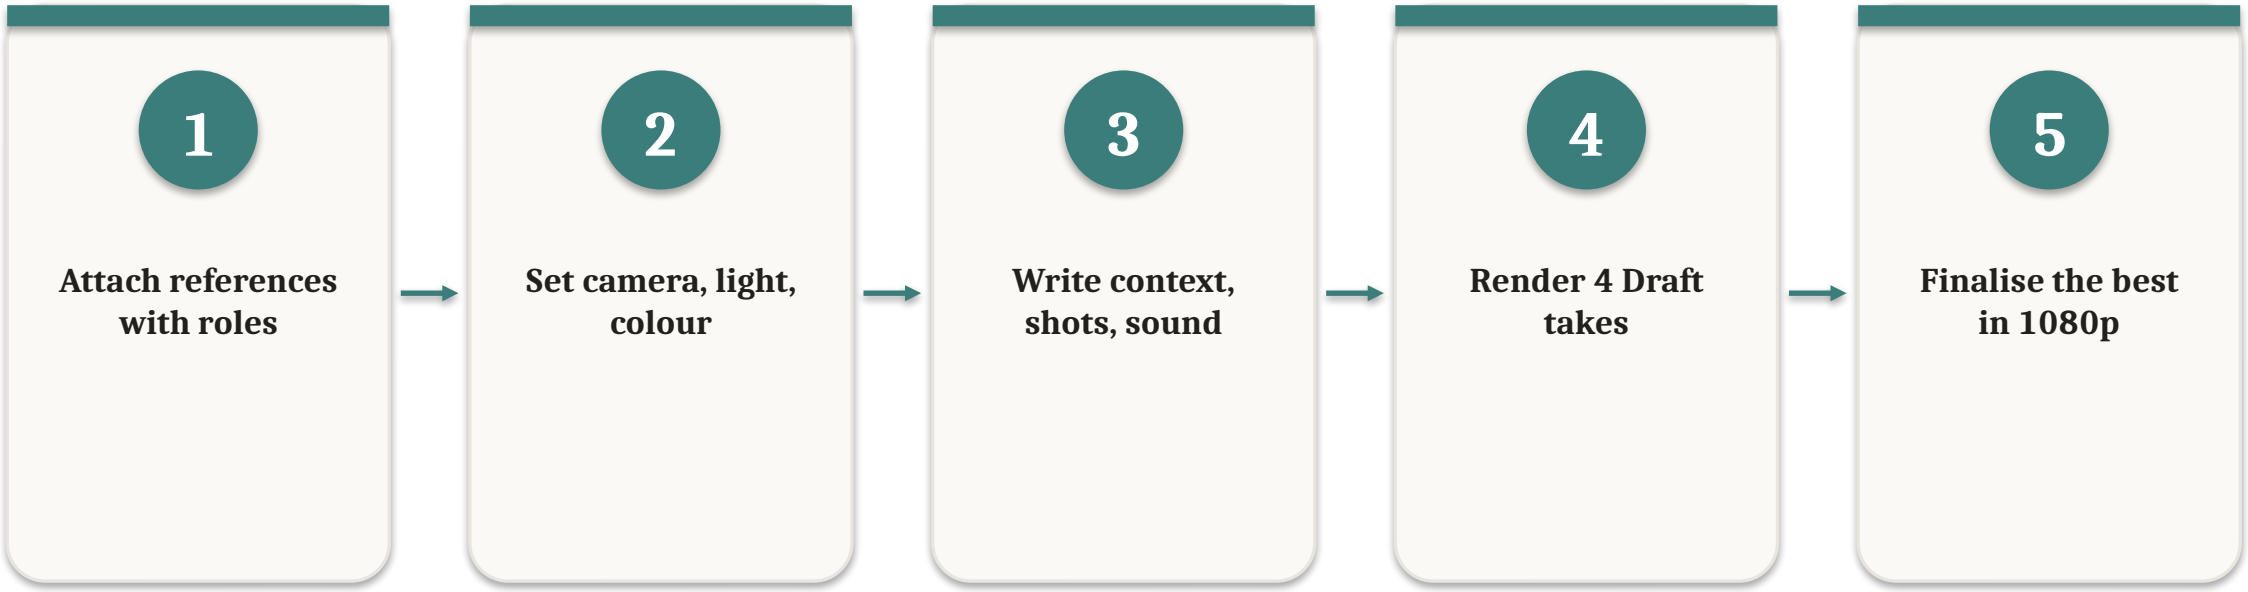

You'll build

Four Draft takes of one scene and one 1080p final of the best take, made from your Elements.

Tools: Higgsfield: Cinema Studio, Seedance 2.5 / Seedance 2.5 Draft, References, Elements

© Tertiary Infotech Academy Pte Ltd

How Lab 5 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 5 — Prompts (1/2)

PROMPT — BAR SCENE — THREE-PART PROMPT (SEEDANCE 2.5)

Scene context: Biker enters a bar with a suitcase, looking for his friend. They notice each other, and the biker walks over and sits next to him as he lays his case flat on the counter.

References:

@char_biker — biker, 100% as shown in the reference image.

@char_friend — friend, 100% as shown in the reference image. He is seated on a stool on the side of the bar counter.

@prop_suitcase — suitcase, 100% as shown in the reference image. It belongs to @char_biker. He carries it in his left hand.

@loc_bar-interior — the bar, 100% as shown in the location reference.

Shots (cut between each):

1. 0–3s: wide, the biker pushes through the door, suitcase in his left hand.
2. 3–6s: medium shot, the friend looks up from his beer. Static camera.
3. 6–9s: close-up, the biker recognises him.
4. 9–12s: medium close-up, the biker sits; dialogue: "Told you I'd make it."
5. 12–15s: close-up, he lays the case flat on the counter.

Sound: bar ambience, footsteps, leather jacket movement, the line of dialogue.

© Tertiary Infotech Academy Pte Ltd

Lab 5 — Prompts (2/2)

PROMPT — ONE CONTINUOUS SHOT (COMPARE)

One continuous 15-second take. Follow a man along a busy New York sidewalk. Move from behind him to a frontal view as he reaches the corner. Keep the action uninterrupted, with no cuts.

© Tertiary Infotech Academy Pte Ltd

Direct Shots and Takes in Cinema Studio

✓ Check your work

All four Drafts use your Elements; your take log scores each take; the 1080p final is the take you scored best and keeps the same faces, prop and bar.

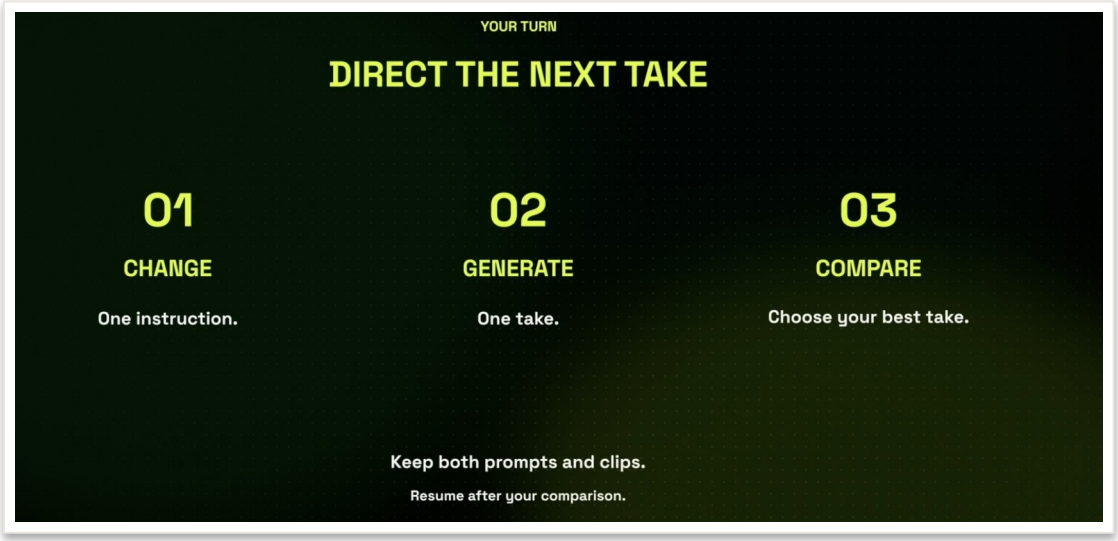

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Keep a useful first take, then direct the next one

A take is a decision you can undo; a deleted take is a lesson lost

Before you refine

Watch with sound, choose ONE change or a variation, save the prompt and the take so you can compare.

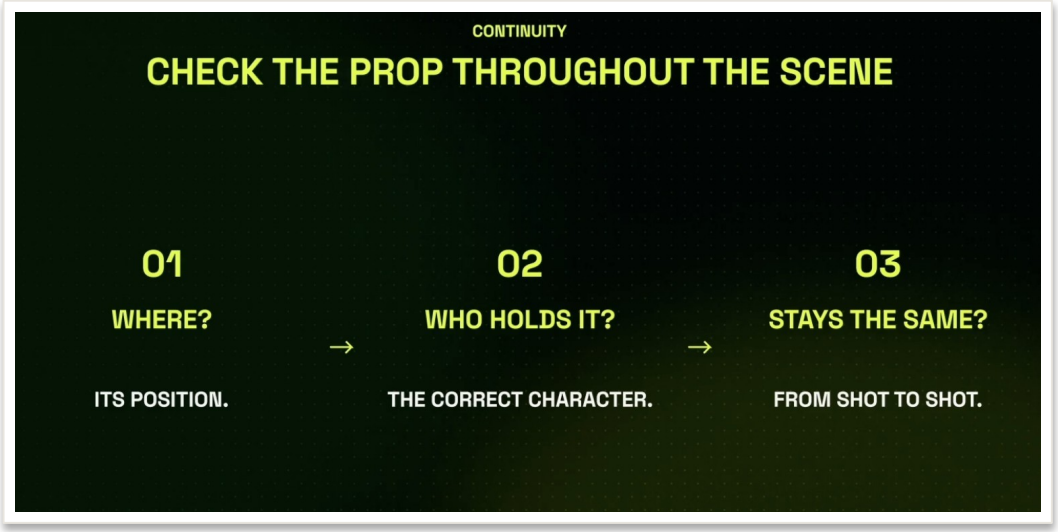

Direct the next take

Change one instruction, generate one take, compare, choose. Keep both prompts and clips.

© Tertiary Infotech Academy Pte Ltd

Continuity: check the prop through the whole scene

Prop teleport is the defect viewers spot first

Where?
Its position in each shot.

Who holds it?
The right character, the right hand.

Same?
Colour, shape and size from shot to shot.

© Tertiary Infotech Academy Pte Ltd

Quality issues → the Higgsfield fix

Issue	Typical cause	Fix in Higgsfield
Face changes between shots	No character reference	Character Element + sheet
Set changes between shots	No location reference	Location Element with anchors
Prop swaps hands or vanishes	Holder not stated	'@prop… belongs to @char…, left hand'
Wrong object in the shot	Model guessed	Genjutsu Replace Object
Soft, low-res final	480p Draft exported	Finalise at 1080p or Upscale
Wrong ratio for TikTok	16:9 master only	Reframe to 9:16

TIP: Learn each issue together with its matching Higgsfield fix.

© Tertiary Infotech Academy Pte Ltd

SCORE EVERY CUT BEFORE EXPORT

Parameters to assess AI video quality

1

Resolution & sharpness

1080p minimum for social; no 480p Draft in the final.

2

Motion & physics

No melting hands, sliding feet or stutter at cuts.

3

Continuity

Faces, clothes, props and sets match shot to shot.

4

Audio

Dialogue clear above music; foley matches the action.

5

Captions & pacing

Accurate, in sync, readable; cuts on the beat.

6

Compliance

Platform specs, AI label, consent, rights.

© Tertiary Infotech Academy Pte Ltd

Cut, Caption and Assess the Scene

LAB 6

MAPS TO review edited footage to improve storytelling; assess footage against technical and legal requirements; quality parameters

Keep the useful first take, direct one more, then have Supercomputer assemble the takes into a captioned cut with a soundtrack. Score the cut against the quality parameters and your Lab 3 standards before anything is exported.

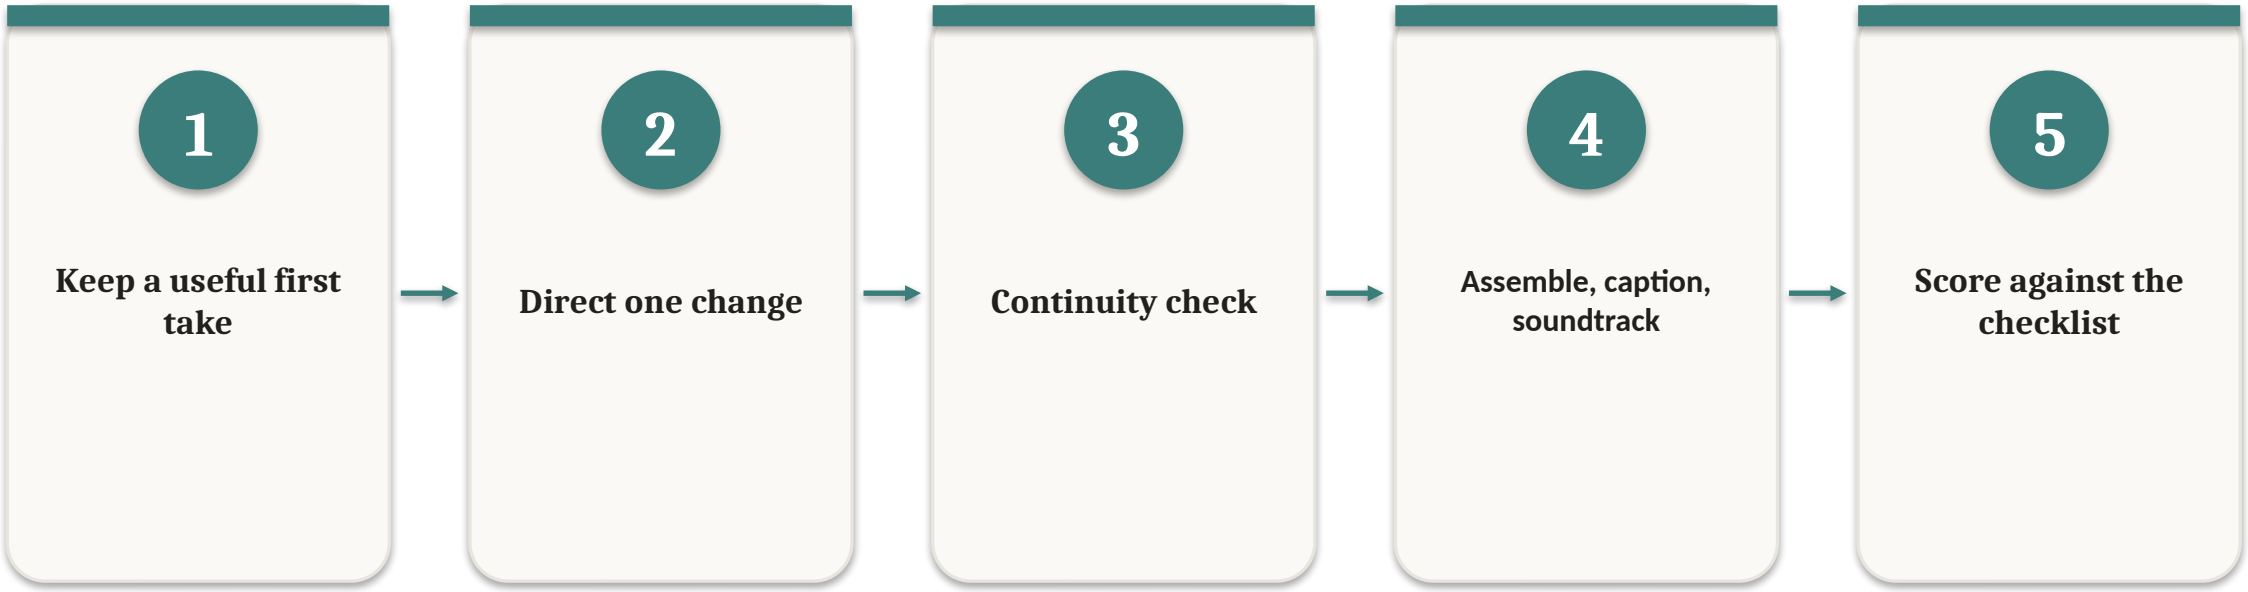

You'll build

A captioned 15–30 s cut in 16:9 and 9:16 with a scored quality checklist and a list of storytelling improvements.

Tools: Higgsfield: Cinema Studio, Supercomputer (video montage: trims, soundtrack, burned captions)

© Tertiary Infotech Academy Pte Ltd

How Lab 6 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 6 — Prompts

PROMPT — DIRECT ONE CHANGE

Keep everything in this take the same. Change one thing only: in shot 3 make the camera push in slowly on the biker's face as he recognises his friend, and add a beat of silence before the dialogue.

PROMPT — ASSEMBLE, CAPTION AND SCORE (SUPERCOMPUTER)

Assemble these two clips into one 20-second cut: take 2 first, then shots 4–5 of take 1. Trim dead frames at each cut.
Add a moody low-tempo soundtrack under the bar ambience, keep the dialogue clearly above the music.
Burn captions for the dialogue: white, bottom third, two lines max. Export 16:9 and 9:16.
Then score the cut against: resolution, motion, face/prop continuity, audio, captions, pacing, platform compliance. Table, pass/fail.

© Tertiary Infotech Academy Pte Ltd

Cut, Caption and Assess the Scene

✓ Check your work

The checklist scores every parameter with a reason, the cut exports in both ratios with readable captions, and you name three storytelling improvements tied to specific shots.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Recap — Improve Video Footage on GAI Powered Video Platforms

4

Lab 4 — Build Your Elements: Characters, Locations and Props

You built: Five saved Elements, two characters, two locations and one prop, each with a reference image and an @handle.

5

Lab 5 — Direct Shots and Takes in Cinema Studio

You built: Four Draft takes of one scene and one 1080p final of the best take, made from your Elements.

6

Lab 6 — Cut, Caption and Assess the Scene

You built: A captioned 15–30 s cut in 16:9 and 9:16 with a scored quality checklist and a list of storytelling improvements.

© Tertiary Infotech Academy Pte Ltd

TOPIC 3

Apply new AI technologies to Improve Video Production

Remove & replace objects · cinematic effects · upscale · voice & music · models compared · publish

1. Lab 7 — Fix What Fails: Remedial Actions in Higgsfield
2. Lab 8 — Add Voice, Music and Cinematic Effects
3. Lab 9 — Use-Case Sprint: One Product Photo to a Published 15-Second Ad
4. Lab 10 — Mini Capstone: Direct Your Own 15-Second Video in Higgsfield

© Tertiary Infotech Academy Pte Ltd

Key Concepts — Topic 3

1

Remove & replace

Genjutsu Replace Object swaps a product, prop or garment in finished footage, keeping the motion.

2

Cinematic effects

Lighting presets, colour grades and viral effect presets add VFX without a compositor.

3

Enhance shots

Upscale to 1080p or 4K, reframe 16:9 to 9:16, regenerate only the broken shot.

4

Voice & music

Native Seedance audio, a cloned voice for narration and a generated soundtrack.

5

Models compared

Seedance 2.5, Kling 4.0, Cinema Studio 4.0 and Genjutsu: pick per shot on quality, cost and control.

6

Publish responsibly

Export per platform, label synthetic media, clear consent, then share to TikTok or YouTube.

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Topic 3

7

Lab 7 — Fix What Fails: Remedial Actions in Higgsfield

A remediated cut with a before/after checklist and a remedy table (issue, cause, Higgsfield fix, result).

8

Lab 8 — Add Voice, Music and Cinematic Effects

Your scene with a generated soundtrack, a voiceover line and one cinematic effect, plus a rated technology evaluation.

9

Lab 9 — Use-Case Sprint: One Product Photo to a Published 15-Second Ad

A 15-second ad (16:9 and 9:16) made from one product photo, a two-model comparison, and a publish-ready post.

10

Lab 10 — Mini Capstone: Direct Your Own 15-Second Video in Higgsfield

Your own 15-second video (MP4, 1080p) with a capstone scorecard, a remedy table and screenshots of your prompt, takes and fixes.

© Tertiary Infotech Academy Pte Ltd

Remedial actions: from FAIL to fixed

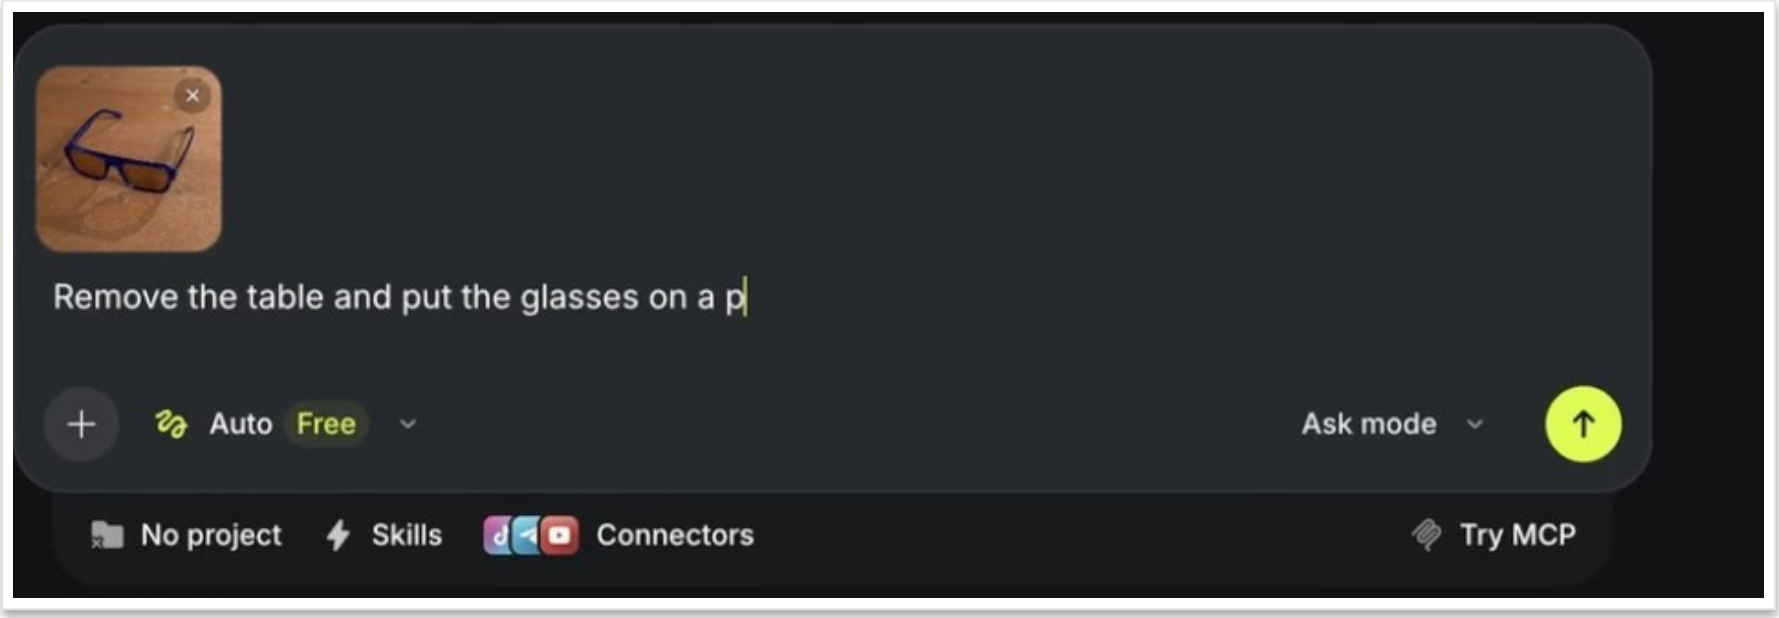

Fails the check	Remedial action	Higgsfield tool
Wrong or drifting object	Swap it, keep the motion	Genjutsu Replace Object
One broken shot	Regenerate that shot only, same Elements	Cinema Studio
Soft or 480p footage	Upscale or finalise the Draft	Upscale · Seedance 2.5
16:9 only, TikTok needs 9:16	Reframe with a safe area	Reframe
Muddy or wrong sound	Rewrite the Sound line, regenerate	Seedance native audio
No AI label / no consent	Add label, record consent	Publish settings

TIP: Order fixes cheapest first: a sound-line rewrite on Draft costs 45 credits; a full 1080p re-shoot costs 240.

© Tertiary Infotech Academy Pte Ltd

Remove or replace an object without re-shooting

For video, Genjutsu Replace Object does the same while keeping the motion

1 Attach the shot

Drop the image or clip into Supercomputer.

2 Say what changes

'Remove the table and put the glasses on a plinth.'

3 Keep everything else

Light, angle and the object itself stay as they were.

© Tertiary Infotech Academy Pte Ltd

COMPLY BEFORE YOU PUBLISH

Industry standards & responsible AI

1

Platform specs

Resolution, ratio, duration and loudness per platform.

2

Commercial rights

Check your Higgsfield plan covers client work.

3

Consent & PDPA

Permission for real faces and voices; clone only with consent.

4

AI disclosure

TikTok's AI-generated label; YouTube's altered or synthetic content setting.

5

Advertising codes

IMDA and ASAS rules apply to AI ads too.

6

Accuracy

No invented product claims; fact-check every line.

© Tertiary Infotech Academy Pte Ltd

Fix What Fails: Remedial Actions in Higgsfield

LAB 7

MAPS TO develop remedial actions for footage that does not meet requirements; industry quality standards

Take every FAIL from your Lab 6 checklist and match it to a Higgsfield fix: replace the wrong object, upscale soft footage, reframe for vertical, or regenerate only the broken shot with the same Elements. Apply at least two fixes and re-score.

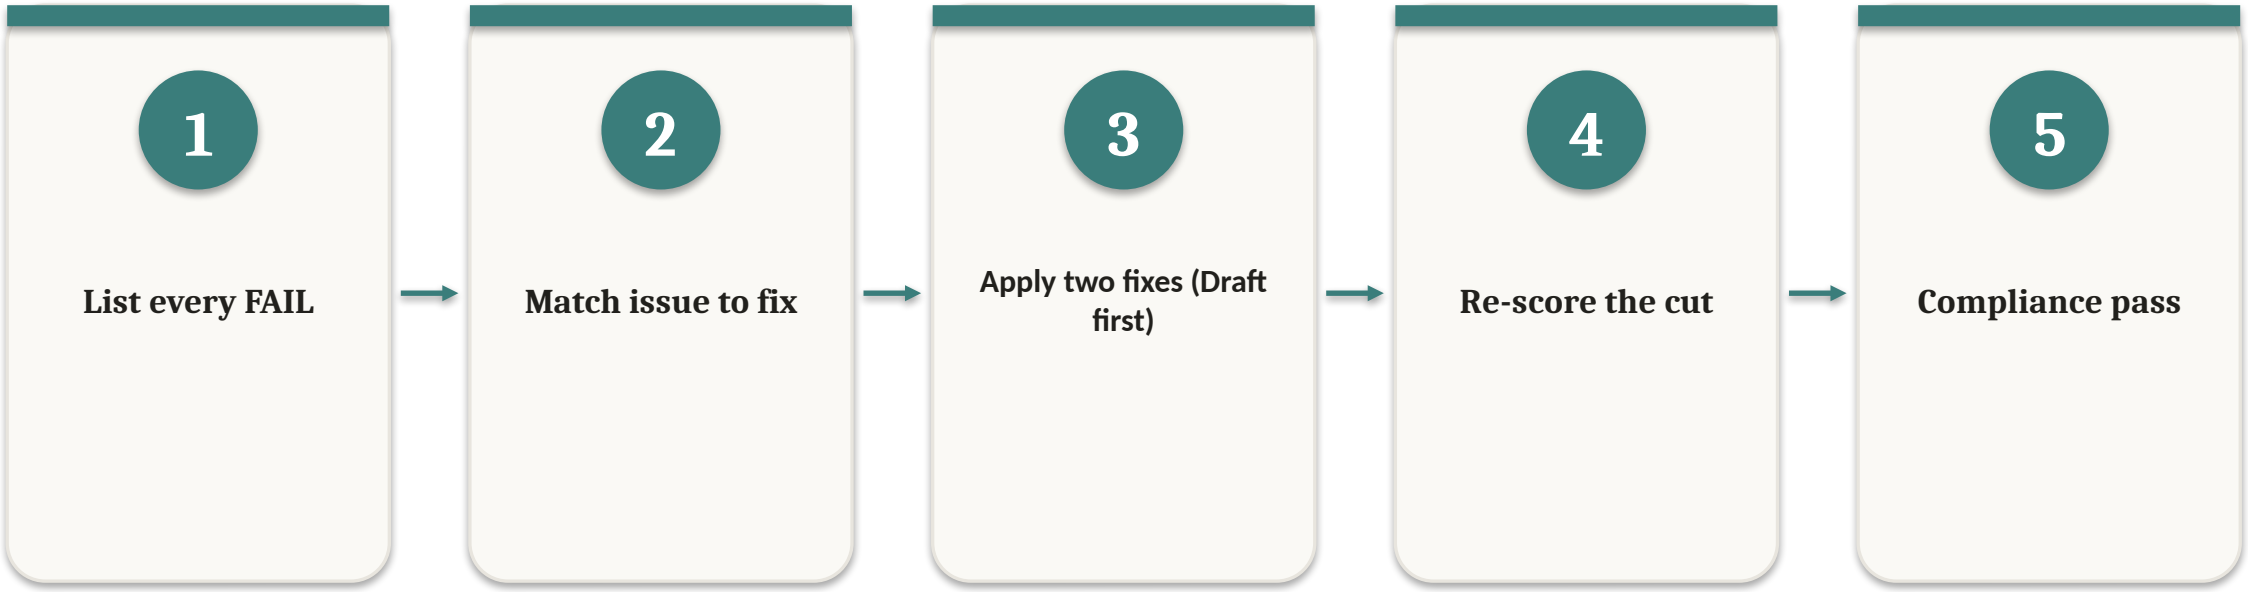

You'll build

A remediated cut with a before/after checklist and a remedy table (issue, cause, Higgsfield fix, result).

Tools: Higgsfield: Genjutsu Replace Object, Upscale, Reframe, Cinema Studio (regenerate a shot)

© Tertiary Infotech Academy Pte Ltd

How Lab 7 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 7 — Prompts (1/2)

PROMPT — DIAGNOSE THE CUT (SUPERCOMPUTER)

Here is my cut and my quality checklist. For every FAIL, give: the issue, the likely cause, the Higgsfield fix (Replace Object, Upscale, Reframe, regenerate one shot with the same Elements, or a new Sound line) and the credit cost. Order the fixes cheapest first. Table.

PROMPT — REPLACE AN OBJECT (GENJUTSU)

Replace the orange briefcase in this clip with the black hard-shell case in the reference image. Keep the hand position, motion, lighting and timing exactly the same.

© Tertiary Infotech Academy Pte Ltd

Lab 7 — Prompts (2/2)

PROMPT — REGENERATE ONE SHOT ONLY

Regenerate shot 3 only. Same Elements (@char_biker, @loc_bar-interior), same framing and timing. Fix: his face must match the reference sheet and the case stays in his left hand.

© Tertiary Infotech Academy Pte Ltd

Fix What Fails: Remedial Actions in Higgsfield

✓ Check your work

At least two FAILs are fixed with named Higgsfield tools, the re-score shows them as PASS, and the remedy table states the cause and credit cost of each fix.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Voice, music and effects: three vendors become three prompts

1

Native sound

Seedance 2.5 renders ambience, foley and dialogue with the picture.

2

Soundtrack

Higgsfield Audio composes a track from genre, tempo and mood.

3

Your voice

Create Voice from a clean sample: only with consent.

4

Cinematic effects

Lighting presets, colour grades and effect presets on any shot.

5

Enhance

Upscale to 1080p or 4K; reframe for vertical.

6

Publish

Connect TikTok and post from Higgsfield, or export MP4.

© Tertiary Infotech Academy Pte Ltd

A REPEATABLE EVALUATION RUBRIC

Evaluating a new AI technology

Criterion	Ask	Red flag
Quality	Does output meet your standards sheet?	Drift, artefacts, robotic voice
Speed & cost	Minutes and credits per finished 15 s?	Credits burn faster than value
Control	Can you direct and iterate the result?	Black box, no editing
Rights	Commercial use on your plan?	Licence excludes client work
Fit	Works inside your Higgsfield pipeline?	New silo, manual re-export

TIP: Labs 8 and 9 use this rubric: rate voice, music and effects, then two video models on the same prompt.

© Tertiary Infotech Academy Pte Ltd

Add Voice, Music and Cinematic Effects

LAB 8

MAPS TO technologies that improve efficiency and quality; evaluate new technologies

Finish the scene with the three upgrades that used to need three vendors: a generated soundtrack, a voiceover in a cloned or stock voice, and a cinematic effect. Time each one and rate it on quality, cost and control.

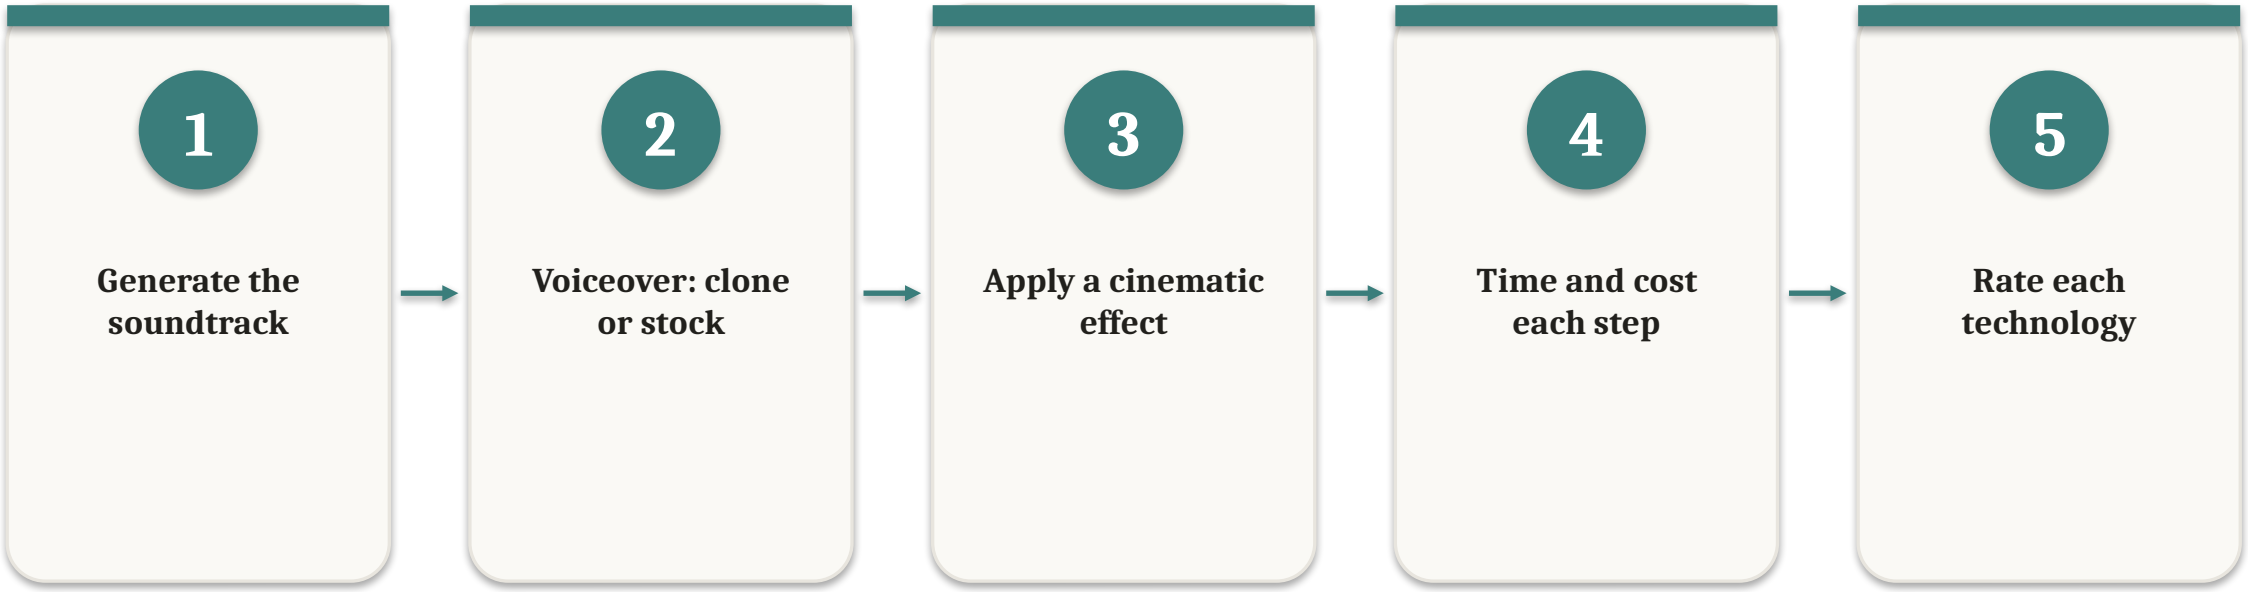

You'll build

Your scene with a generated soundtrack, a voiceover line and one cinematic effect, plus a rated technology evaluation.

Tools: Higgsfield: Audio (music + voice), Create Voice, lighting and colour presets, effect presets

© Tertiary Infotech Academy Pte Ltd

How Lab 8 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 8 — Prompts (1/2)

PROMPT — SOUNDTRACK

Moody late-night bar soundtrack, 20 seconds, slow 80 BPM, warm Rhodes piano, soft brushed drums, upright bass, building slightly on the last 5 seconds. Instrumental, no vocals.

PROMPT — VOICEOVER LINE

Calm, low male voice, unhurried, Singapore English: "Some nights you don't need a plan. You just need to show up."

© Tertiary Infotech Academy Pte Ltd

Lab 8 — Prompts (2/2)

PROMPT — CINEMATIC EFFECT RE-RUN

Same shot, same Elements. Lighting: silhouette against the window, city lights behind. Colour: Black gloss. Slow push-in. Keep timing and action identical.

© Tertiary Infotech Academy Pte Ltd

Add Voice, Music and Cinematic Effects

✓ Check your work

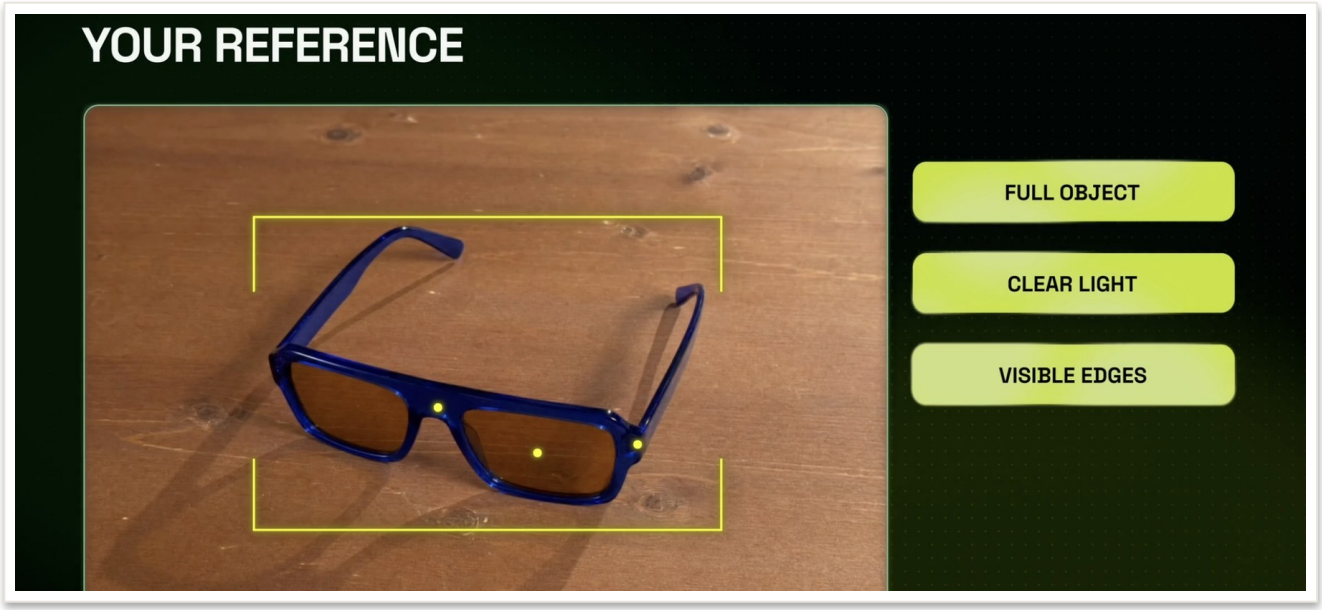

The scene carries a generated soundtrack and a consented voiceover, one shot shows a clear cinematic effect, and every technology has a 1–5 rating with a keep/drop verdict.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Start every product video from a clean product reference

The model can only keep what it can see

Full object

The whole product in frame, nothing cropped.

Clear light

Even light, no hard shadows hiding the shape.

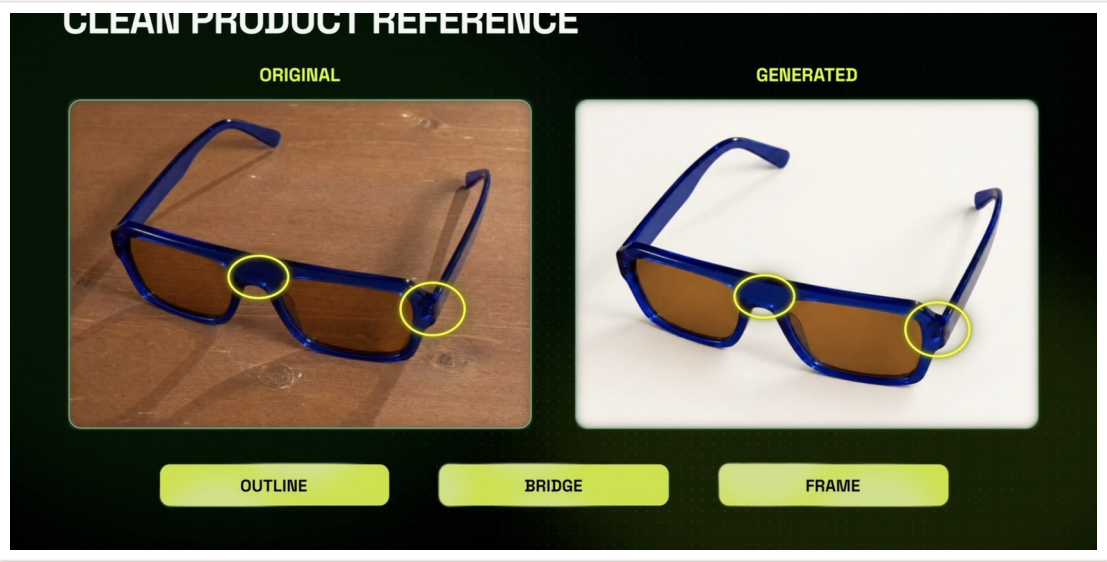

Visible edges

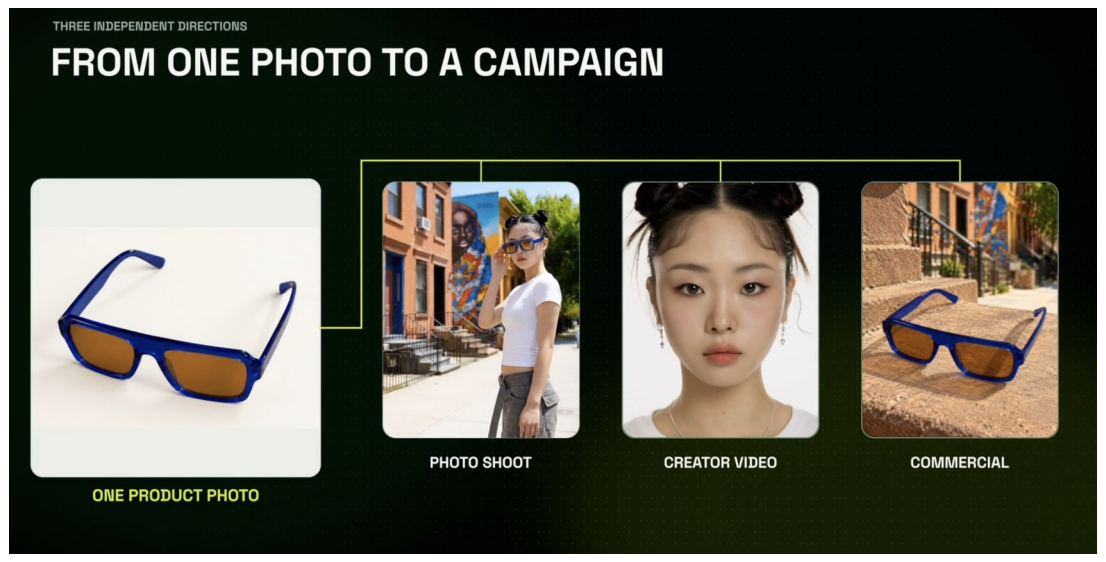

A plain background so the outline is unmistakable.

© Tertiary Infotech Academy Pte Ltd

Check the product survives generation

Approve the product in stills before you spend on video

Original vs generated

Compare the outline, the bridge and the frame. If a detail changed in a still, it will change in video.

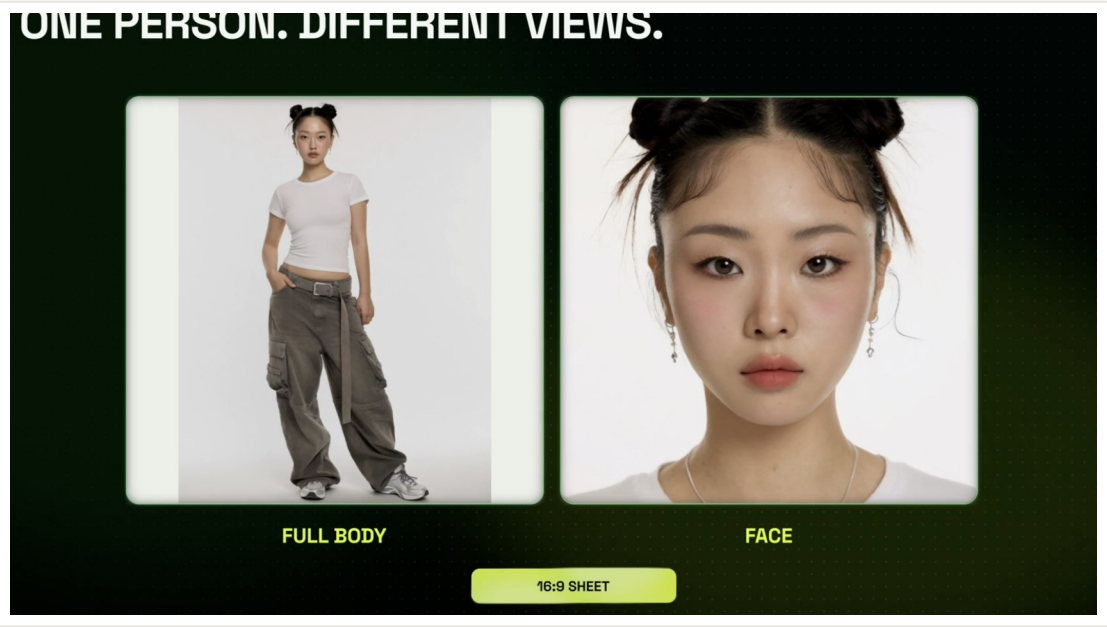

One photo becomes a campaign

Photo shoot, creator video and commercial, all from one product photo plus a character and a location.

© Tertiary Infotech Academy Pte Ltd

Cast a model and scout three locations

The same Elements workflow as Lab 4, pointed at a product

One person, different views

Full body and face on one 16:9 sheet: the creator for every shot.

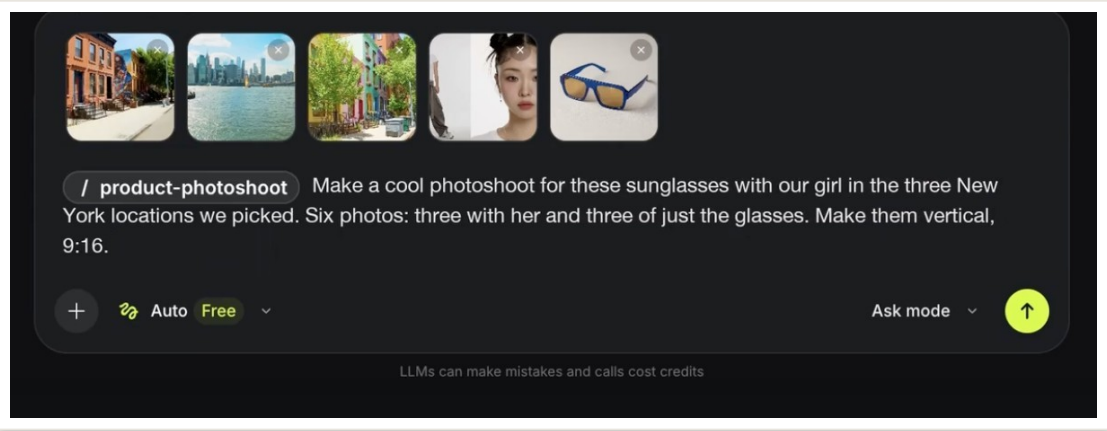

Round 3 of the location scout

Generate, compare, tweak the prompt, run it again until three streets feel right.

© Tertiary Infotech Academy Pte Ltd

Run the photoshoot skill, get the stills

Lab 9 runs this on the SOLA bottle

/product-photoshoot

'Six photos: three with her and three of just the glasses. Make them vertical, 9:16.'

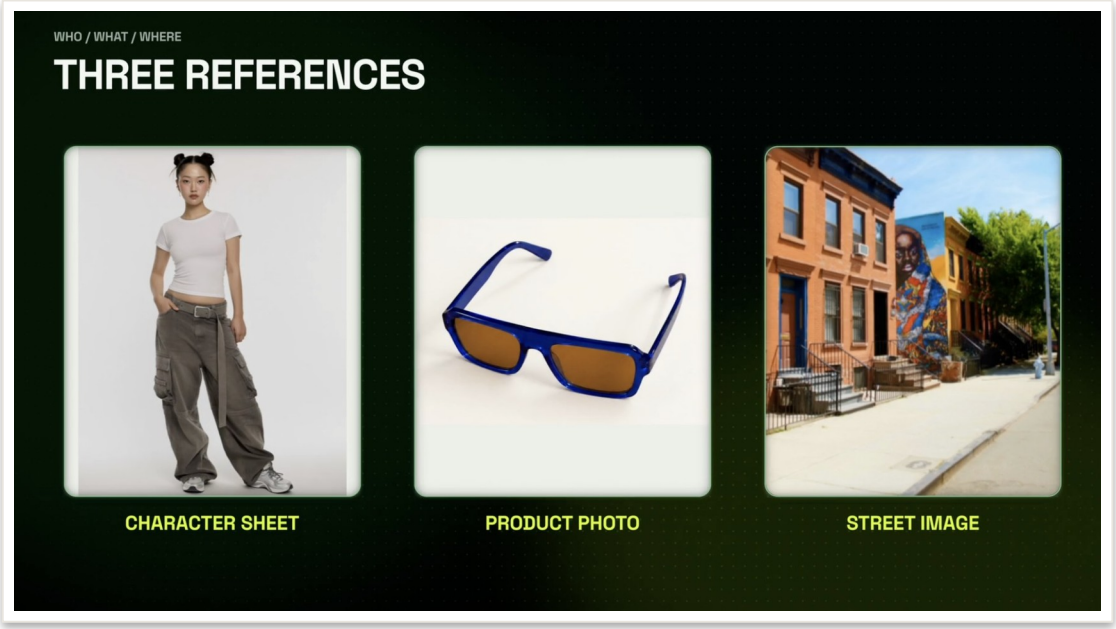

Product close-ups

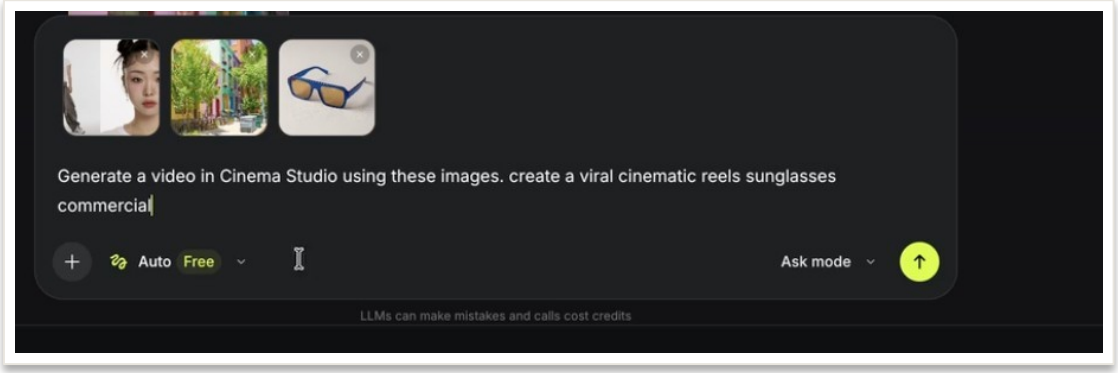

The product placed in each scouted location, light matched to the scene.

© Tertiary Infotech Academy Pte Ltd

Three references in, a viral reel out

Supercomputer writes the shots; you approve the spend

Character sheet + product photo + street image

The three references every shot of the reel inherits.

One instruction to Supercomputer

'Generate a video in Cinema Studio using these images. Create a viral cinematic reels sunglasses commercial.'

© Tertiary Infotech Academy Pte Ltd

Use-Case Sprint: One Product Photo to a Published 15-Second Ad

LAB 9

MAPS TO evaluate new technologies; industry standards before publishing

Run the whole pipeline on a real use case. Start from one product photo, shoot a campaign with the product-photoshoot skill, make a 15-second ad in Cinema Studio, compare two video models on the same prompt, then export, label and publish.

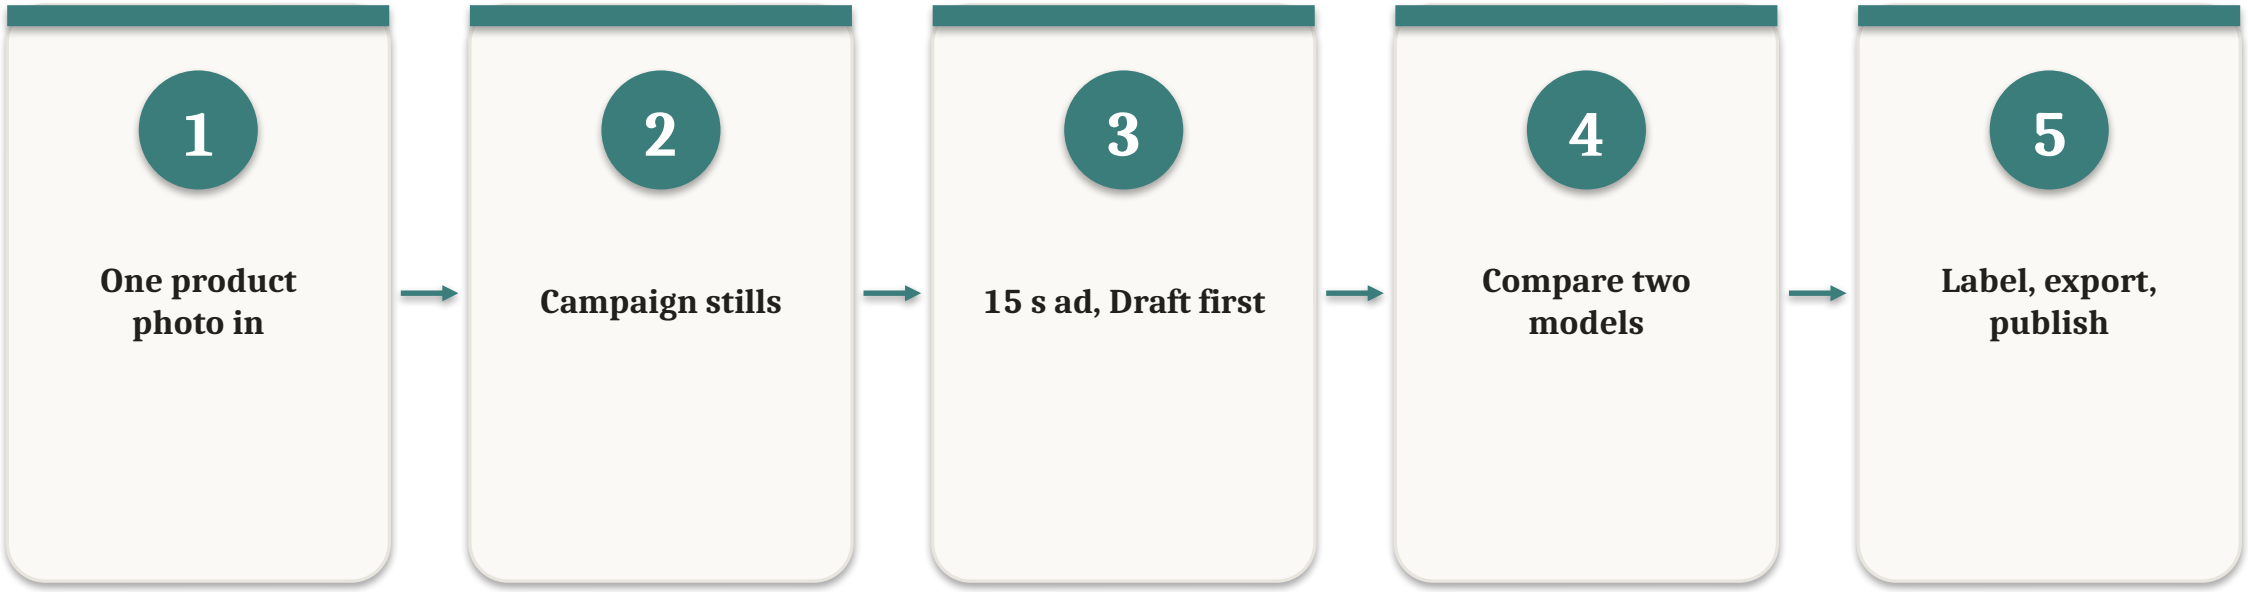

You'll build

A 15-second ad (16:9 and 9:16) made from one product photo, a two-model comparison, and a publish-ready post.

Tools: Higgsfield: Supercomputer (/product-photoshoot), Cinema Studio, Seedance 2.5, Kling 4.0, TikTok publishing

© Tertiary Infotech Academy Pte Ltd

How Lab 9 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 9 — Prompts (1/2)

PROMPT — CAMPAIGN STILLS (/PRODUCT-PHOTOSHOOT)

/product-photoshoot Make a cool photoshoot for this bottle with our runner in the three Singapore locations we picked. Six photos: three with her and three of just the bottle. Make them vertical, 9:16.

© Tertiary Infotech Academy Pte Ltd

Lab 9 — Prompts (2/2)

PROMPT — 15-SECOND AD — FIVE SHOTS (CINEMA STUDIO)

Scene context: A 15-second premium commercial for SOLA, a matte-black insulated steel bottle, at sunrise on a Singapore rooftop running track.
References: @prop_sola — the bottle, 100% as shown. @char_runner — runner, 100% as shown.
Shots (hard cut between each):
1. 0–3s: extreme close-up, first sun ray slides across the bottle. Slow push-in.
2. 3–6s: medium, the runner grabs it mid-stride. Tracking.
3. 6–9s: close-up, she drinks; ice clinks. Slow motion.
4. 9–12s: wide, she runs along the rooftop edge, skyline glowing. Drone pulls back.
5. 12–15s: hero packshot, clean space at top for the logo.
Sound: upbeat electronic beat building to a hit on the packshot, footsteps, ice, whoosh on each cut. No on-screen text.

PROMPT — PICK A USE CASE (VARIATION)

Rewrite this ad brief as a 15-second AI micro-drama cliffhanger: same product, two characters, one twist in the last 3 seconds, vertical 9:16, dialogue in one line.

© Tertiary Infotech Academy Pte Ltd

Use-Case Sprint: One Product Photo to a Published 15-Second Ad

✓ Check your work

The ad runs 15 s in both ratios, keeps the product accurate in every shot, the comparison table justifies the chosen model on at least three criteria, and the post carries an AI-generated label.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

Mini capstone: your video, start to finish

YOUR CAPSTONE EVIDENCE

Keep screenshots of your prompt, takes and fixes, a scorecard, and the final MP4 of your video. Budget: 500 credits.

© Tertiary Infotech Academy Pte Ltd

What a strong capstone looks like

Check	Strong looks like	Watch out for
Story	One clear who / where / what happens in 15 s	Three ideas crammed into one clip
Consistency	Saved Elements in every shot	Faces or products that change
Process	Draft takes before one 1080p final	Spending 240 credits per experiment
Quality	Scorecard before and after, two named fixes	'Looks fine' with no evidence
Compliance	Ratio per platform, AI label, no real likeness	Unlicensed logos or music

TIP: Walk the room during the capstone: check every learner has two Draft takes before they finalise, and that the checklist is complete.

© Tertiary Infotech Academy Pte Ltd

Mini Capstone: Direct Your Own 15-Second Video in Higgsfield

LAB 10

MAPS TO the whole pipeline — script, standards, Elements, takes, quality review, remedies and tool evaluation on one video of your own

Pick your own use case — an AI ad, a micro-drama episode, an AI influencer post or a sci-fi moment — and take it from brief to a finished 15-second video in Higgsfield on your own: three-line brief, saved Elements, Draft takes, one 1080p final, a quality score, two fixes and a short evaluation.

You'll build

Your own 15-second video (MP4, 1080p) with a capstone scorecard, a remedy table and screenshots of your prompt, takes and fixes.

Tools: Higgsfield: Supercomputer, Elements, Cinema Studio, Seedance 2.5 Draft, Genjutsu / Upscale / Reframe

© Tertiary Infotech Academy Pte Ltd

How Lab 10 Runs

© Tertiary Infotech Academy Pte Ltd

Lab 10 — Prompts

PROMPT — CAPSTONE PLANNING (SUPERCOMPUTER)

Here is my three-line brief:
WHO: <character or product>
WHERE: <one location>
WHAT HAPPENS: <one visible action with an ending>
Platform: <TikTok 9:16 / YouTube 16:9>. Use case: <ad / micro drama / influencer / other>.
Ask me up to three questions, then write a 15-second plan in three parts — scene context, references (my @elements and their roles), 4–6 timed shots with size, camera and sound — and a credit estimate using Seedance 2.5 Draft first. Wait for my approval before generating.

PROMPT — SELF-REVIEW BEFORE YOU FIX

Score my 15-second video against: resolution, motion and physics, face/prop/set continuity, audio, captions, pacing, platform compliance.
For each FAIL give the cause and the cheapest Higgsfield fix (Replace Object, regenerate one shot, Upscale, Reframe or a new Sound line) with its credit cost. Table.

© Tertiary Infotech Academy Pte Ltd

Mini Capstone: Direct Your Own 15-Second Video in Higgsfield

✓ Check your work

The video runs 15 s at 1080p, uses at least one saved Element, has a scorecard with before/after scores, shows two named Higgsfield fixes, carries an AI-generated label plan, and every item on the capstone checklist is ticked in the checklist.

Detailed step-by-step instructions: Learner Guide + the lab folder in labs/.

© Tertiary Infotech Academy Pte Ltd

TOPIC 3 · ETHICS

Just because you can generate it doesn't mean you should publish it.

Seven ethical issues, nine real cases and one rule for each: the last stop before anything you make goes live.

© Tertiary Infotech Academy Pte Ltd

Core ethical issues in GenAI video

1

Consent and likeness

Putting real people's faces, voices or movements into training data or digital replicas without permission violates their autonomy and privacy.

2

Intellectual property and creator rights

Models trained on copyrighted film, art and styles without permission or payment face lawsuits from studios and independent creators.

3

Deepfakes and misinformation

Hyper-realistic synthetic video enables political manipulation, fake news and non-consensual media, eroding trust in visual evidence.

4

Economic displacement

Automation in video production, storyboarding and VFX threatens jobs across the creative industries.

5

Algorithmic bias and representation

Training data encodes historical, racial and gender stereotypes that generators can reproduce.

6

Environmental impact

Training and running large video models consumes large amounts of electricity and water in data centres.

7

Transparency and authenticity

Presenting synthetic video as genuine, or not labelling it, deceives viewers and blurs reality.

© Tertiary Infotech Academy Pte Ltd

When it went wrong: real cases (1/2)

Issue	Case	What happened
Consent and likeness	Scarlett Johansson v. OpenAI 'Sky' (May 2024)	She declined to voice ChatGPT; OpenAI shipped a voice that sounded like her, then paused it after her lawyers wrote.
Consent and likeness	Bryan Cranston, SAG-AFTRA and Sora 2 (Oct 2025)	Unauthorised clips of his voice and likeness appeared after Sora 2 launched; OpenAI agreed opt-in protections with the union.
Intellectual property	Disney and Universal v. Midjourney (June 2025)	Hollywood's first AI copyright suit: the studios call the image generator 'a bottomless pit of plagiarism' for copying Darth Vader, Elsa and the Minions.
Deepfakes and fraud	Arup deepfake video call, Hong Kong (Jan 2024)	A finance worker joined a video call with a deepfaked CFO and colleagues and paid out HK$200 million (about US$25.6 million) in 15 transfers.
Deepfakes and elections	Singapore bans election deepfakes (Oct 2024)	The Elections (Integrity of Online Advertising) (Amendment) Act bans realistic fakes of candidates during elections; first applied at GE2025.

TIP: Sources (verified 9 Nov 2026): Scarlett Johansson v. OpenAI 'Sky' (May 2024) — CNBC, Variety, 20 May 2024; Bryan Cranston, SAG-AFTRA and Sora 2 (Oct 2025) — CNBC, 20 Oct 2025; Disney and Universal v. Midjourney (June 2025) — CNBC, Reuters, 11 Jun 2025; Arup deepfake video call, Hong Kong (Jan 2024) — CNN, 17 May 2024; Singapore bans election deepfakes (Oct 2024) — CNA, 15 Oct 2024

© Tertiary Infotech Academy Pte Ltd

When it went wrong: real cases (2/2)

Issue	Case	What happened
Economic displacement	SAG-AFTRA strike (2023, 118 days)	Actors struck partly over AI; the deal requires consent and pay for digital replicas. A video-game strike over AI followed in July 2024.
Bias and representation	Google pauses Gemini images of people (Feb 2024)	Gemini produced historically inaccurate depictions of people; Google paused people images and apologised.
Environmental impact	Google 2024 Environmental Report (Jul 2024)	Emissions 48% higher in 2023 than 2019, driven by data-centre energy for AI.
Transparency	TikTok auto-labels AI content (May 2024)	First video platform to read C2PA Content Credentials and label AI-made videos, including those made elsewhere.

TIP: Sources (verified 9 Nov 2026): SAG-AFTRA strike (2023, 118 days) — Authors Guild; LA Times; Google pauses Gemini images of people (Feb 2024) — TechCrunch; Google blog, 22–23 Feb 2024; Google 2024 Environmental Report (Jul 2024) — BBC, Bloomberg, 2 Jul 2024; TikTok auto-labels AI content (May 2024) — CNBC, NBC News, 9 May 2024

© Tertiary Infotech Academy Pte Ltd

Seven issues, seven rules for your own videos

Issue	Your rule in every Higgsfield project
Consent and likeness	Only your own face/voice or people who signed consent; no look-alikes of real people.
Intellectual property and creator rights	No real brands, songs or characters without a licence; credit owners; check your plan's commercial rights.
Deepfakes and misinformation	Never depict real people saying or doing things they did not; never make 'news' footage.
Economic displacement	Use AI to extend a crew, not to pass off AI work as a person's; credit the humans who direct and edit.
Algorithmic bias and representation	Review every cast for stereotypes; specify diverse, respectful characters in the prompt.
Environmental impact	Draft at 480p first; finalise only the take you will use; delete failed batches, not just hide them.
Transparency and authenticity	Turn on the platform's AI-generated label; say 'made with AI' in captions or credits.

TIP: These rules sit on top of the compliance checks: label AI content, clear consent and rights, follow platform and IMDA/ASAS codes.

© Tertiary Infotech Academy Pte Ltd

Recap — Apply new AI technologies to Improve Video Production

7

Lab 7 — Fix What Fails: Remedial Actions in Higgsfield

You built: A remediated cut with a before/after checklist and a remedy table (issue, cause, Higgsfield fix, result).

8

Lab 8 — Add Voice, Music and Cinematic Effects

You built: Your scene with a generated soundtrack, a voiceover line and one cinematic effect, plus a rated technology evaluation.

9

Lab 9 — Use-Case Sprint: One Product Photo to a Published 15-Second Ad

You built: A 15-second ad (16:9 and 9:16) made from one product photo, a two-model comparison, and a publish-ready post.

10

Lab 10 — Mini Capstone: Direct Your Own 15-Second Video in Higgsfield

You built: Your own 15-second video (MP4, 1080p) with a capstone scorecard, a remedy table and screenshots of your prompt, takes and fixes.

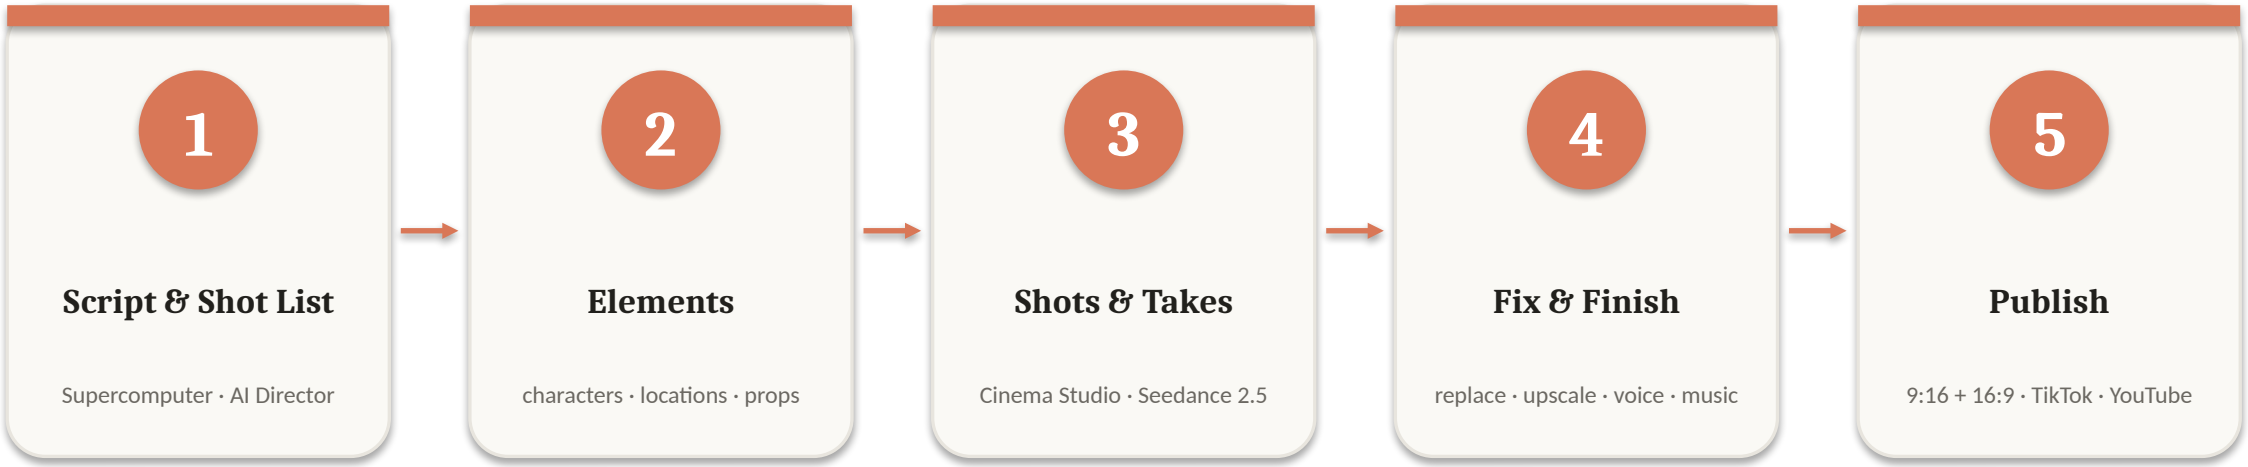

© Tertiary Infotech Academy Pte Ltd

WRAP-UP

Course Summary & Next Steps

© Tertiary Infotech Academy Pte Ltd

The Pipeline You Now Own

TEN LABS, ONE STUDIO

Script and plan (Labs 1–3) → Elements (Lab 4) → shots and takes (Lab 5) → cut and assess (Lab 6) → fix (Lab 7) → voice, music, effects (Lab 8) → a published ad (Lab 9) → your own video, start to finish (Lab 10).

© Tertiary Infotech Academy Pte Ltd

LEARNING OUTCOMES DELIVERED

What You Achieved

1

Scripts & shot lists

Supercomputer and AI Director turn three lines into a timed, reviewable shot list.

2

Standards & budgets

A standards sheet and a work plan priced in real Draft and 1080p credits.

3

Elements

Characters, locations and props saved once and reused by @handle.

4

Shots & takes

Cinema Studio controls, references with roles, Draft first, 1080p for the keeper.

5

Fix & finish

Replace, upscale, reframe, voice, music and cinematic effects.

6

Evaluate & publish

A rubric for every new model, and an ad that is labelled and live.
